Bases Of Special Functions And Their Domains Of Convergence:

Bases of Special Functions and Their Domains of Convergence Josef Saurer, 1993-09 A systematic approach to expansions of analytic functions in series of special functions is presented Many expansions of this kind are identified with eigenfunction expansions for differential operators in the complex domain Central points of our theory are the construction of biorthogonal canonical systems of eigen and associated functions and the determination of the domains of convergence of the corresponding eigenfunction expansions

Special Functions N.Ja. Vilenkin, A.U. Klimyk, 2013-04-17 In 1991 1993 our three volume book *Representation of Lie Groups and Special Functions* was published When we started to write that book in 1983 editors of Kluwer Academic Publishers expressed their wish for the book to be of encyclopaedic type on the subject Interrelations between representations of Lie groups and special functions are very wide This width can be explained by existence of different types of Lie groups and by richness of the theory of their representations This is why the book mentioned above spread to three big volumes Influence of representations of Lie groups and Lie algebras upon the theory of special functions is lasting This theory is developing further and methods of the representation theory are of great importance in this development When the book *Representation of Lie Groups and Special Functions* vol 1 3 was under preparation new directions of the theory of special functions connected with group representations appeared New important results were discovered in the traditional directions This impelled us to write a continuation of our three volume book on relationship between representations and special functions The result of our further work is the present book The three volume book published before was devoted mainly to studying classical special functions and orthogonal polynomials by means of matrix elements Clebsch Gordan and Racah coefficients of group representations and to generalizations of classical special functions that were dictated by matrix elements of representations

Maslov Classes, Metaplectic Representation and Lagrangian Quantization Maurice de Gosson, 1997 The Maslov Classes have been playing an essential role in various parts of applied and pure mathematics and physics since the early 70 s Their correct definition is due to V I Arnold and J Leray in the transversal case and to P Dazord and the author in the general case The aim of this book is to give a thorough treatment of the theory of the Maslov classes and of their relationship with the metaplectic group It is among other things shown that these classes can be reconstructed modulo 4 using only the analytic properties of the metaplectic group In the last chapter the author sketches a scheme for geometric quantization by introducing two new concepts that of metaplectic half form and that of Lagrangian catalogue the latter generalizes and simplifies the notion of Lagrangian function introduced by J Leray A Lagrangian catalogue is a collection of metaplectic half forms which are themselves cohomological wave functions whose definition is made possible by using the combinatorial properties of the Maslov classes The transformation of Lagrangian catalogues under the metaplectic group and

of Hamiltonian flows is studied and it is shown that one thus recovers very easily the so called quasi classical approximation to the solutions of Schrödinger equation if one introduces a natural concept that of projection of a Lagrangian catalogue An application to geometric phase shifts including Berry's phase is given *Systems and Networks, Systems and Networks: Mathematical Theory and Applications* Uwe Helmke, Reinhard Mennicken, Josef Saurer, 1994-09-06 The Symposium of the Mathematical Theory of Networks and Systems MTNS is an international event which is held biannually since 1973 MTNS 93 was the tenth meeting and the first one organized in Germany It took place in Regensburg in August 1993 The symposia focus attention on the mathematical foundations of systems control and circuit theory signal processing and their applications areas which are of vital interest for mathematicians and engineers The successful interaction between advanced mathematical methods and engineering problems is continuing to create an impressive body of theories and new results The first volume contains the key invited lectures presented at MTNS 93 The contributions are written by outstanding researchers working in the areas of the symposium They describe new developments in the theory and its applications presenting major new advances in linear and nonlinear control operator theoretic methods as well as modelling issues

Chebyshev & Fourier Spectral Methods John P. Boyd, 1989-09-15 The goal of this book is to teach spectral methods for solving boundary value eigenvalue and time dependent problems Although the title speaks only of Chebyshev polynomials and trigonometric functions the book also discusses Hermite Laguerre rational Chebyshev sinc and spherical harmonic functions These notes evolved from a course I have taught the past five years to an audience drawn from half a dozen different disciplines at the University of Michigan aerospace engineering meteorology physical oceanography mechanical engineering naval architecture and nuclear engineering With such a diverse audience this book is not focused on a particular discipline but rather upon solving differential equations in general The style is not lemma theorem Sobolev space but algorithms guidelines rules of thumb Although the course is aimed at graduate students the required background is limited It helps if the reader has taken an elementary course in computer methods and also has been exposed to Fourier series and complex variables at the undergraduate level However even this background is not absolutely necessary Chapters 2 to 5 are a self contained treatment of basic convergence and interpolation theory

Radial Basis Functions Martin D. Buhmann, 2003-07-03 In many areas of mathematics science and engineering from computer graphics to inverse methods to signal processing it is necessary to estimate parameters usually multidimensional by approximation and interpolation Radial basis functions are a powerful tool which work well in very general circumstances and so are becoming of widespread use as the limitations of other methods such as least squares polynomial interpolation or wavelet based become apparent The author's aim is to give a thorough treatment from both the theoretical and practical implementation viewpoints For example he emphasises the many positive features of radial basis functions such as the unique solvability of the interpolation problem the computation of interpolants their smoothness and convergence and

provides a careful classification of the radial basis functions into types that have different convergence A comprehensive bibliography rounds off what will prove a very valuable work *Pure Mathematics and Applications* ,1999 **Bulletin of the American Mathematical Society** ,1899 Variational Calculus Jean-Pierre Bourguignon,2022-11-12 This book provides a comprehensive introduction to the Calculus of Variations and its use in modelling mechanics and physics problems Presenting a geometric approach to the subject it progressively guides the reader through this very active branch of mathematics accompanying key statements with a huge variety of exercises some of them solved Stressing the need to overcome limitations of the initial point of view and emphasising the interconnectivity of various branches of mathematics algebra analysis and geometry the book includes some advanced material to challenge the most motivated students Systematic short historical notes provide details on the subject s odyssey and how new tools have been developed over the last two centuries This English translation updates a set of notes for a course first given at the cole polytechnique in 1987 It will be accessible to graduate students and advanced undergraduates **Bulletin (new Series) of the American Mathematical Society** ,1900
