- 1. What is the different position of the needle synchroscope? What is the difference between 6 and 12?**

06:00 means that at synchronization. We cannot parallelize the incoming generator. Means 24:00 perfectly Synchronized state (voltage, frequency, and phase sequence identity).

- 2. Why do we close switch 11 and not 12?**

When the synchroscope is about 12 hours, the "slip" between the sine waves is near the minimum (the slip equals Zero when the synchroscope 12) and the difference voltage between the phases minimum synchroscope is 12 Hours). Because of the time it takes to close the switch synchronous, usually it has in 11 hours. Due to the low Delay to close, 11, are nearly 12 hours approach.

- 3. Why is a Megger used for insulation testing and not for a mustimeter?**

project you've worked on and how you overcame obstacles

Example Answer One of the most challenging projects I've worked on was a large scale industrial automation project aimed at upgrading and modernizing an existing manufacturing facility. The project involved integrating new automated equipment and control systems into the existing production lines while minimizing downtime and ensuring seamless operation. One of the main obstacles we encountered was compatibility issues between the legacy equipment and the new control systems which led to communication errors and performance issues during testing. To overcome this challenge I collaborated closely with the project team to identify the root causes of the compatibility issues and develop solutions to address them. This involved modifying the communication protocols, updating firmware and software configurations and implementing hardware modifications as needed. I conducted thorough testing and validation to verify the effectiveness of the solutions and worked closely with the operations team to ensure a smooth transition to the new systems. Despite the challenges we were able to successfully complete the project on schedule and within budget, achieving significant improvements in productivity, efficiency and reliability for the client. This experience taught me the importance of proactive problem solving, effective communication and collaboration in overcoming obstacles and delivering successful outcomes in complex engineering projects.
