

Project Scheduling Steps

Develop the WBS -

A WBS is sort of like a step by step process for accomplishing the goals set out in the project plan

Define tasks and logic -

In this step, the work to be done is further broken down into individual tasks

Estimate task duration -

The duration of each task is estimated, which gives the total project length

Define resources -

Resources can be things like materials or software. One of the most important resources is the project teams' time

Analyze the schedule -

Some of the most important tools available to a project manager are project scheduling techniques

Project Planning, Scheduling, and Control in Construction Calin M. Popescu, Chotchai Charoenngam, 1995-03-20 Critical
Path Method CPM and Performance Evaluation and Review Technique PERT are widely recognized as the most
effective methods of keeping large complex construction projects on schedule under budget and up to professional standards
But these methods remain underused because they are poorly understood and due to a host of unfamiliar terms and
applications may seem more complicated than they really are This encyclopedia brings together in one comprehensive volume
all terms definitions and applications related to the time and cost management of construction projects While many of these
terms refer to ancient and venerable building practices others have evolved quite recently and refer specifically to
modern construction and management techniques Sources include hundreds of professional books trade journals and research
publications as well as planning and scheduling software vendor literature The detailed glossary of all applicable terms
includes across referenced listing of examples that describe real world applications for each term supplied An extensive
bibliography covers all applicable books articles and periodicals available on project planning scheduling and control using
CPM and related subjects This book is an important quick reference and desktop information resource for construction
planners schedulers and controllers as well as civil engineers and project managers It is also the ultimate research tool for
educators students or anyone who seeks to improve their understanding of the management of modern construction projects

Project Planning, Scheduling, and Control, 2001 **An Introduction to Project Modeling and Planning** Gündüz
Ulusoy, Öncü Hazır, 2021-04-05 This textbook teaches the basic concepts and methods of project management but also
explains how to convert them to useful results in practice Project management offers a promising working area for
theoretical and practical applications and developing software and decision support systems DSS This book specifically
focuses on project planning and control with an emphasis on mathematical modeling Models and algorithms establish a good
starting point for students to study the relevant literature and support pursuing academic work in related fields The book
provides an introduction to theoretical concepts and it also provides detailed explanations application examples and case
studies that deal with real life problems The chapter topics include questions that underlie critical thinking interpretation
analytics and making comparisons Learning outcomes are defined and the content of the book is structured following these

goals Chapter 1 begins by introducing the basic concepts methods and processes of project management This Chapter constitutes the base for defining and modeling project management problems Chapter 2 explores the fundamentals of organizing and managing projects from an organization's perspective Issues related to project team formation the role of project managers and organization types are discussed Chapter 3 is devoted to project planning and network modeling of projects covering fundamental concepts such as project scope Work Breakdown Structure WBS Organizational Breakdown Structure OBS Cost Breakdown Structure CBS project network modeling activity duration and cost estimating activity based costing ABC data and knowledge management Chapter 4 introduces deterministic scheduling models which can be used in constructing the time schedules Models employing time based and finance based objectives are introduced The CPM is covered The unconstrained version of maximizing Net Present Value NPV is also treated here together with the case of time dependent cash flows Chapter 5 focuses on the time cost trade off problem explaining how to reduce the duration of some of the activities and therefore reduce the project duration at the expense of additional costs This topic is addressed for both continuous and discrete cases Chapter 6 discusses models and methods of scheduling under uncertain activity durations PERT is introduced for minimizing the expected project duration and extended to the PERT Costing method for minimizing the expected project cost Simulation is presented as another approach for dealing with the uncertainty in activity durations and costs To demonstrate the use of the PERT a case study on constructing an earthquake resistant residential house is presented Classifications of resource and schedule types are given in Chapter 7 and exact and heuristic solution procedures for the single and multi mode resource constrained project scheduling problem RCPSP are presented The objective of maximizing NPV under resource constraints is addressed and the capital constrained project scheduling model is introduced In Chapter 8 resource leveling and further resource management problems are introduced Total adjustment cost and resource availability cost problems are introduced Various exact models are investigated A heuristic solution procedure for the resource leveling problem is presented in detail Also resource portfolio management policies and the resource portfolio management problem are discussed A case study on resource leveling dealing with the annual audit project of a major corporation is presented Project contract types and payment schedules constitute the topics of Chapter 9 Contracts are legal documents reflecting the results of some form of client contractor negotiations and sometimes of a bidding process which deserve closer attention Identification and allocation of risk in contracts project control issues disputes and resolution management are further topics covered in this Chapter A bidding model is presented to investigate client contractor negotiations and the bidding process from different aspects Chapter 10 focuses on processes and methods for project monitoring and control Earned Value Management is studied to measure the project performance throughout the life of a project and to estimate the expected project time and cost based on the current status of the project How to incorporate inflation into the analysis is presented In Chapter 11 qualitative and quantitative techniques including decision trees

simulation and software applications are introduced Risk phases are defined and building a risk register is addressed An example risk breakdown structure is presented The design of risk management processes is introduced and risk response planning strategies are discussed At the end of the Chapter the quantitative risk analysis is demonstrated at the hand of a team discussion case study Chapter 12 covers several models and approaches dealing with various stochastic aspects of the decision environment Stochastic models generation of robust schedules use of reactive and fuzzy approaches are presented Sensitivity and scenario analysis are introduced Also simulation analysis which is widely used to analyze the impacts of uncertainty on project goals is presented Chapter 13 addresses repetitive projects that involve the production or construction of similar units in batches such as railway cars or residential houses Particularly in the construction industry repetitive projects represent a large portion of the work accomplished in this sector of the economy A case study on the 50 km section of a motorway project is used for demonstrating the handling of repetitive project management How best to select one or more of a set of candidate projects to maintain a project portfolio is an important problem for project based organizations with limited resources The project selection problem is inherently a multi objective problem and is treated as such in Chapter 14 Several models and solution techniques are introduced A multi objective multi period project selection and scheduling model is presented A case study that addresses a project portfolio selection and scheduling problem for the construction of a set of dams in a region is presented Finally Chapter 15 discusses three promising research areas in project management in detail i Sustainability and Project Management ii Project Management in the Era of Big Data and iii the Fourth Industrial Revolution and the New Age Project Management We elaborate on the importance of sustainability in project management practices discuss how developments in data analytics might impact project life cycle management and speculate how the infinite possibilities of the Fourth Industrial Revolution and the new technologies will transform project management practices
