Work hands on with code snippets to understand the technology Better, Faster, Lighter Java Bruce Tate, Justin Gehtland, 2004-05-28 Sometimes the simplest answer is the best Many Enterprise Java developers accustomed to dealing with Java's spiraling complexity have fallen into the habit of choosing overly complicated solutions to problems when simpler options are available Building server applications with heavyweight Java based architectures such as WebLogic JBoss and WebSphere can be costly and cumbersome When you've reached the point where you spend more time writing code to support your chosen framework than to solve your actual problems it's time to think in terms of simplicity In Better Faster Lighter Java authors Bruce Tate and Justin Gehtland argue that the old heavyweight architectures are unwieldy complicated and contribute to slow and buggy application code As an alternative means for building better applications the authors present two lightweight open source architectures Hibernate a persistence framework that does its job with a minimal API and gets out of the way and Spring a container that's not invasive heavy or complicated Hibernate and Spring are designed to be fairly simple to learn and use and place reasonable demands on system resources Better Faster Lighter Java shows you how they can help you create enterprise applications that are easier to maintain write and debug and are ultimately much faster Written for intermediate to advanced Java developers Better Faster Lighter Java offers fresh ideas often unorthodox to help you rethink the way you work and techniques and principles you'll use to build simpler applications You'll learn to spend more time on what's important When you're finished with this book you'll find that your Java is better faster and lighter than ever before **Beginning JBoss Seam** Joseph Faisal Nusairat, 2007-04-30 Reacting to the popularity of Java 2.0 Enterprise Edition™ alternatives such as Ruby on Rails and the enterprise Spring Framework Red Hat JBoss Inc developed JBoss Seam a new open source lightweight Java™ EE 5 based contextual application development framework Beginning JBoss Seam From Novice to Professional gets you started as the first book on this popular framework **Beginning Java and Flex** Filippo di Pisa, 2011-09-07 Over the past few years the now open source Adobe Flex framework has been adopted by the Java community as the preferred framework for Java rich Internet applications RIAs using Flash for the presentation layer Flex helps Java developers to build and maintain expressive web desktop applications that deploy consistently on all major browsers desktops and operating systems Beginning Java and Flex describes new simpler and faster ways to develop enterprise RIAs This book is not only for Java or Flex developers but also for all web developers who want to increase their productivity and the quality of their development The aim of the book is to teach the new frontier of web development using open source agile lightweight Java frameworks with Flex Java lightweight framework programming helps Flex developers create dynamic looking enterprise applications Flex and Java are becoming very popular for both business and interactive applications
