**ENDORSEMENTS** I am delighted to recommend this volume which uncovers two important truths to the success of the UN

- 1 The critical role of civil society that makes the UN more humane
- 2 The important role of behavioral sciences in shaping UN policies to produce successful outcomes

Because of the UN we've not had a third world war yet Human Rights have expanded beyond belief of anyone who founded the UN 75 years ago Bruce Knotts U S diplomat author and Chair of the U N DPI NGO Executive Committee

As this new volume describes the world is a better place because of the United Nations where most of the world comes together with diverse and lofty goals such as protecting the environment promoting health supporting equality and maintaining peace All of these major goals require interventions that sometimes maintain and sometimes change human behavior National and international policies need to be informed by the best available research in the behavioral sciences Our future depends on it Diane F Halpern PhD Former President American Psychological Association

Attaining the United Nations 17 Sustainable Development Goals SDGs by 2030 is a formidable challenge that can be furthered by a foundation of solid evidence This book provides a base of relevant psychological knowledge that can inform policy and interventions in the achievement of those goals Judith A Gibbons PhD Past President Interamerican Society of Psychology

The authors make a convincing case for the relevance of behavioral sciences to the work of the United Nations Progress on women's rights preparing for and recovering from natural disasters adapting to climate change improving child well being and more all have behavioral dimensions These must be addressed for the UN to make progress on its goals By chronicling the involvements of psychology and social work in the United Nations this volume will inspire students and practitioners to engage further in global work and advocacy Lynne Healy PhD International Association of Schools of Social Work

Behavioral Science in the Global Arena a timely and significant volume about the role of psychologists at the UN addressing our contemporary social problems i.e human rights social justice climate and environmental change As Congress Takooshian and Asper demonstrate it is time for psychologists to move from their individual focus toward social change at a macro diverse and global focus following the UN's 17 sustainable development goals for 2030 We need to acknowledge changing population demographics growing mobility and aging in our population and recognize the continued gender inequities and disparities among migrants salient today No longer can we simply consider psychology's role in the aftermath of disaster but to be proactive and on the forefront about counterterrorism climate change etc to promote global action so that we think and act together toward shared social change Jean Lau Chin EdD ABPP Past President International Division American Psychological Association

As the UN celebrates its diamond anniversary it is fitting that thinkers in psychology provide critical insights into psychology's engagement with the UN SDG Agenda The authors have carefully considered the UN from many vantage points especially behavioural This important volume posits fresh ideas for psychology's role and future impact in the only global body that brings all governments together to tackle the social economic political and security factors that are essential for peace and collective human development in our fragile world

Saths Cooper PhD Past President International Union of Psychological Scientists IUPsyS I am very excited to see the publication of a much needed book on the contribution of the behavioral sciences at the UN which highlights the role of social work The editors have successfully illuminated how social workers have been increasingly involved in addressing international issues Speaking as the current president of NASW member of the International Federation of Social Workers Executive and as a social work educator I am especially appreciative of the content on the long term involvement that social workers have had in the work of the UN This book is a gift to students who are increasingly seeking to become involved in international social work I am especially impressed by the editors commitment to promoting the professional development of students by having them co author the chapters in the book with both academics and UN leaders Well done Kathryn Conley Wehrmann PhD LCSW President National Association of Social Workers NASW

**Behavioral Sciences** Ronald S. Krug, Alvah R. Cass, 2012-12-06 There are five separate sections to this book arranged in a logical sequence Section One covers normal phenomenology of human behavior including issues of learning and growth and development Section Two addresses the theories of human development which have implications for problem behavior as well as the psychosocial issues in health care delivery The latter are those issues which are not clearly psychopathology but represent problems in health care delivery which physicians encounter in the normal practice of medicine Section Three is an overview of psychopathology in both children and adults and Section Four deals with the diagnosis and intervention issues involved in various forms of psychopathology and problems of living Section Five is the overview of the different systems of health care delivery and the incidence prevalence of different health care problems This is a review text and should not be substituted for more complete texts The authors do not recommend that this book be used as a course text except to those academic offerings that are specifically directed to an overview of the behavioral sciences To use this book effectively the beginning student should start at the first chapter and progress through the text in a systematic fashion For the more advanced student the basic information in Sections One and Two might be skipped and they can proceed directly to Sections Three and Four
