Practical Theories for Nursing Practice Debra J. Gillespie, Brenda Petersen, 2025-05-02

Nursing theories from the 1950 1970s may not fully address the complexities of today's healthcare environment as they are often content and context specific. With the rise of Evidence based Practice (EBP) staff nurses are expected to lead quality improvement and practice changes aligning with Micro systems Theory and the American Nurses Credentialing Center's Magnet Recognition Program. However, nurses typically learn nursing theory only in undergraduate and graduate programs without exposure to change theories, quality improvement models or EBP translation theories from other fields like psychology and education. This book offers a concise overview of education, communication and quality improvement theories that are practical and valuable for clinical practice. Each chapter provides a summary of these theories and supporting evidence for their use in practice, education and research. Although written from a nursing perspective, the book is beneficial for any healthcare professional working in clinical, educational or research settings.

Leddy & Pepper's Professional Nursing Lucy J Hood, 2021-08-06. Easy to read, visually engaging and updated with the latest practices and considerations in clinical nursing practice. Leddy Pepper's Professional Nursing 10th Edition provides a practical overview of the contemporary nursing profession and addresses the philosophical, developmental, sociocultural, environmental, political, health care delivery and leadership issues essential to career enhancement in clinical practice. This enhanced 10th Edition is accompanied by a robust package of interactive resources that engage today's learners and help you instill the understanding and confidence for clinical nursing success.

Competency in Healthcare Les Storey, John Howard, Alan Gillies, 2002. This book offers a practical approach to guide nurses in the art and science of renal care. It is holistic as well as technical, therapeutic and compassionate in its approach. Acute and chronic renal failure, renal osteodystrophy and other selected diseases are comprehensively discussed. The nurse's role with regard to specific treatments such as peritoneal dialysis, haemodialysis, plasma exchange and haemoperfusion as well as organ transplantation procedures are discussed in detail and a section relating specifically to paediatric care is included. The final section of the book is devoted to the use of complementary therapies and alternative medicine in renal disease. The book lays the foundation on which nurses can build their evidence based practice and knowledge, skills and enhance patient care. The aim of this book is to provide a practical, holistic guide for nurses to the skills and knowledge required by them to care for their patients. It covers the renal patient's experiences both physically and psychologically, incorporating the dialysis therapies of acute and chronic failure on to renal transplantation. Nursing renal patients within an acute hospital setting, a chronic dialysis unit or a satellite unit places many challenges on the nurse caring for them today. I therefore hope that this book will provide the knowledge needed by those working in the field of renal nursing and that it will be used as a resource in renal units throughout the UK.
