Cooperative Control of Distributed Multi-Agent Systems Jeff Shamma, 2008-02-28 The paradigm of multi agent cooperative control is the challenge frontier for new control system application domains and as a research area it has experienced a considerable increase in activity in recent years This volume the result of a UCLA collaborative project with Caltech Cornell and MIT presents cutting edge results in terms of the dimensions of cooperative control from leading researchers worldwide This dimensional decomposition allows the reader to assess the multi faceted landscape of cooperative control Cooperative Control of Distributed Multi Agent Systems is organized into four main themes or dimensions of cooperative control distributed control and computation adversarial interactions uncertain evolution and complexity management The military application of autonomous vehicles systems or multiple unmanned vehicles is primarily targeted however much of the material is relevant to a broader range of multi agent systems including cooperative robotics distributed computing sensor networks and data network congestion control Cooperative Control of Distributed Multi Agent Systems offers the reader an organized presentation of a variety of recent research advances supporting software and experimental data on the resolution of the cooperative control problem It will appeal to senior academics researchers and graduate students as well as engineers working in the areas of cooperative systems control and optimization Urban Energy Systems James Keirstead, Nilay Shah, 2013 This book analyses the technical and social systems that satisfy these needs and asks how methods can be put into practice to achieve this

Linear Algebra And Optimization With Applications To Machine Learning - Volume Ii: Fundamentals Of Optimization Theory With Applications To Machine Learning Jean H Gallier, Jocelyn Quaintance, 2020-03-16 Volume 2 applies the linear algebra concepts presented in Volume 1 to optimization problems which frequently occur throughout machine learning This book blends theory with practice by not only carefully discussing the mathematical under pinnings of each optimization technique but by applying these techniques to linear programming support vector machines SVM principal component analysis PCA and ridge regression Volume 2 begins by discussing preliminary concepts of optimization theory such as metric spaces derivatives and the Lagrange multiplier technique for finding extrema of real valued functions The focus then shifts to the special case of optimizing a linear function over a region determined by affine constraints namely linear programming Highlights include careful derivations and applications of the simplex algorithm the dual simplex algorithm and the primal dual algorithm The theoretical heart of this book is the mathematically rigorous presentation of various nonlinear optimization methods including but not limited to gradient decent the Karush Kuhn Tucker KKT conditions Lagrangian duality alternating direction method of multipliers ADMM and the kernel method These methods are carefully applied to hard margin SVM soft margin SVM kernel PCA ridge regression lasso regression and elastic net regression Matlab programs implementing these methods are included

Mastering Time - Innovative Solutions to Complex Scheduling Problems Ali Soofastaei, 2025-05-07 Time is

one of our most valuable resources yet managing it effectively is often one of the toughest challenges **Mastering Time Innovative Solutions to Complex Scheduling Problems** is a comprehensive guide introducing new methods and solutions to solve complex scheduling problems in professional contexts By mastering these creative solutions you can gain control over your time This book presents practical strategies and tools to streamline workflows optimize resource allocation and tackle bottlenecks head on Whether you are managing multiple projects balancing competing priorities or simply seeking to organize your time better the insights provided in this book will help you unlock new levels of productivity and efficiency With real world examples cutting edge technologies like artificial intelligence and time tested techniques **Mastering Time Innovative Solutions to Complex Scheduling Problems** equips readers with the knowledge and tools to transform even the most challenging schedules into manageable efficient plans Dive into the future of scheduling where complexity is simplified and time is truly mastered

Simulation, Optimization, and Machine Learning for Finance, second edition

Dessislava A. Pachamanova, Frank J. Fabozzi, Francesco A. Fabozzi, 2025-09-09 A comprehensive guide to simulation optimization and machine learning for finance covering theoretical foundations practical applications and data driven decision making **Simulation Optimization and Machine Learning for Finance** offers a comprehensive introduction to the quantitative tools essential for asset management and corporate finance This extensively revised and expanded edition builds upon the foundation of the textbook **Simulation and Optimization in Finance** integrating the latest advancements in quantitative tools Designed for undergraduates graduate students and professionals seeking to enhance their analytical expertise in finance the book bridges theory with practical application making complex financial concepts more accessible Beginning with a review of foundational finance principles the text progresses to advanced topics in simulation optimization and machine learning demonstrating their relevance in financial decision making Readers gain hands on experience developing financial risk models using these techniques fostering conceptual understanding and practical implementation Provides a structured introduction to probability inferential statistics and data science Explores cutting edge techniques in simulation modeling optimization and machine learning Demonstrates real world asset allocation strategies advanced portfolio risk measures and fixed income portfolio management using quantitative tools Covers factor models and stochastic processes in asset pricing Integrates capital budgeting and real options analysis emphasizing the role of uncertainty and quantitative modeling in long term financial decision making Is suitable for practitioners students and self learners

Ban, 2005 **Minimum-support Solutions for Radiotherapy Planning** Stephen Clyde Billups, 2001 **Cause and Effect Business Analytics and Data Science** Dominique Haughton, Jonathan Haughton, Victor S. Y. Lo, 2025-07-15 Among the most important questions that businesses ask are some very simple ones If I decide to do something will it work And if so how large are the effects To answer these predictive questions and later base decisions on them we need to establish causal

relationships Establishing and measuring causality can be difficult This book explains the most useful techniques for discerning causality and illustrates the principles with numerous examples from business It discusses randomized experiments aka A B testing and techniques such as propensity score matching synthetic controls double differences and instrumental variables There is a chapter on the powerful AI approach of Directed Acyclic Graphs aka Bayesian Networks another on structural equation models and one on time series techniques including Granger causality At the heart of the book are four chapters on uplift modeling where the goal is to help firms determine how best to deploy their resources for marketing or other interventions We start by modeling uplift discuss the test and learn process and provide an overview of the prescriptive analytics of uplift The book is written in an accessible style and will be of interest to data analysts and strategists in business to students and instructors of business and analytics who have a solid foundation in statistics and to data scientists who recognize the need to take seriously the need for causality as an essential input into effective decision making
