Big Data Analytics Project Management:

Data Analytics in Project Management Seweryn Spalek, 2018-10-25 This book aims to help the reader better understand the importance of data analysis in project management. Moreover, it provides guidance by showing tools, methods, techniques, and lessons learned on how to better utilize the data gathered from the projects. First and foremost, insight into the bridge between data analytics and project management aids practitioners looking for ways to maximize the practical value of data procured. The book equips organizations with the know-how necessary to adapt to a changing workplace dynamic through key lessons learned from past ventures. The book's integrated approach to investigating both fields enhances the value of research findings.

Big Data Analytics Project Management Tiffani Crawford, 2013-10-01 Big Data Analytics technologies offer many great benefits along with challenges for project management professionals. Beyond common misconceptions about Big Data Analytics, there are many obstacles to business value. Project managers must be experts in the technologies and exploratory methodologies.

Deriving a big data analytics framework. Approaching the project management process for big data initiatives Theres Mitscherling, 2019-10-09 Master's Thesis from the year 2018 in the subject Computer Science Commercial Information Technology grade 7 Queensland University of Technology Faculty of Science and Engineering course Master in Business Process Management language English abstract This thesis investigates the project management approach for big data projects for industry partner Red Rocks Company. The aim of this project is to understand best practice project management for big data initiatives and to develop a framework to help such projects to deliver the expected advantages. A brief literature review is undertaken to find out how big data projects are managed. From this, a Big Data Analytics Framework is derived which is based on CRISP-DM. The framework is validated through interviews with stakeholders from the corporate sector. For this case study, the first three phases of the Business Process Management Lifecycle are applied: process discovery, analysis, and design. Key findings of the case study are that literature recommends an agile project management approach for big data initiatives. On the contrary, the majority of interviewed industry stakeholders confirm a waterfall approach is conducted more often to deliver such projects. The developed Big Data Analytics Framework will add significant benefits to Red Rocks Company as it will help to successfully deliver big data initiatives in the future. Big data is considered a key enabler for future decision making and process automation. The topic is, however, very new and not well understood yet. Hence, 50% of big data projects are not delivering the expected benefits and are costing more than initially planned.
