Change of Paradigms - New Paradoxes Jocelyne Daems, Eline Zenner, Kris Heylen, Dirk Speelman, Hubert Cuyckens, 2015-10-16 In *Paradigm and Paradox* Dirk Geeraerts formulated many of the basic tenets that were to form what Cognitive Linguistics is today *Change of Paradigms New Paradoxes* links back to this seminal work exploring which of the original theories and ideas still stand strong which new questions have arisen and which ensuing new paradoxes need to be addressed It thus reveals how Cognitive Linguistics has developed and diversified over the past decades **Computational**

Phraseology Gloria Corpas Pastor, Jean-Pierre Colson, 2020-05-15 Whether you wish to deliver on a promise take a walk down memory lane or even on the wild side phraseological units also often referred to as phrasemes or multiword expressions are present in most communicative situations and in all world s languages Phraseology the study of phraseological units has therefore become a rare unifying theme across linguistic theories In recent years an increasing number of studies have been concerned with the computational treatment of multiword expressions these pertain among others to their automatic identification extraction or translation and to the role they play in various Natural Language Processing applications Computational Phraseology is a comparatively new field where better understanding and more advances are urgently needed This book aims to address this pressing need by bringing together contributions focusing on different perspectives of this promising interdisciplinary field **Nominal and Pronominal Address in Jamaica and**

Trinidad Matthias Klumm, 2021-09-15 This book examines the various patterns of nominal and pronominal address used in Jamaica and Trinidad the two most populous islands of the English speaking Caribbean Given that the Anglo Caribbean context has so far been largely neglected in address research this study aims to provide an in depth analysis of the linguistic means Jamaicans and Trinidadians have at their disposal and make use of to address each other A particular focus will be on variation in the speakers address behaviour with regard to their sex age social class ethnicity and regional background The study draws both on data from a self compiled corpus of postcolonial Jamaican and Trinidadian literary works and on questionnaire and interview data collected during fieldwork This book contributes to the ever growing body of research in the field of nominal and pronominal address and will be relevant to researchers interested in the fields of sociolinguistics pragmatics and World Englishes

Semantic differences in translation Lore Vandevoorde, 2020-05-06 Although the notion of meaning has always been at the core of translation the invariance of meaning has partly due to practical constraints rarely been challenged in Corpus based Translation Studies In answer to this the aim of this book is to question the invariance of meaning in translated texts if translation scholars agree on the fact that translated language is different from non translated language with respect to a number of grammatical and lexical aspects would it be possible to identify differences between translated and non translated language on the semantic level too More specifically this books tries to formulate an answer to the following three questions i how can semantic differences in translated vs non translated language be investigated in a corpus based study ii are there any differences on the semantic level between translated and non translated language and iii if there are differences on the semantic level can we ascribe them to any of the universal tendencies of translation In this book I establish a way to visually explore semantic similarity on the basis of representations of translated and non translated semantic fields A technique for the comparison of semantic fields of translated and non translated language called SMM based on Helge Dyvik s Semantic Mirrors method is developed yielding statistics based visualizations of semantic fields The SMM is presented via the case of inchoativity in Dutch beginnen to begin By comparing the visualizations of the semantic fields on different levels translated Dutch with French as a source language with English as a source language and non translated Dutch I further explore whether the differences between translated and non translated fields of inchoativity in Dutch can be linked to any of the well known universals of translation The main results of this study are explained on the basis of two cognitively inspired frameworks Halverson s Gravitational Pull Hypothesis and Paradis neurolinguistic theory of bilingualism

Quantitative Methods in Cognitive Semantics: Corpus-Driven Approaches Dylan Glynn, Kerstin Fischer, 2010-11-29 In line with the increasing use of empirical methods in Cognitive Linguistics the current volume explores the uses of quantitative in particular corpus driven techniques for the study of meaning It shows how these techniques contribute to the core theoretical issues of Cognitive Semantics as well as how they inform semantic analysis The research presented in the volume constitutes an important step towards an Empirical Cognitive Semantics

Language Behavior Abstracts ,2009-02 Corpus Approaches to Language, Thought and Communication Wei-lun Lu,Naděžda Kudrnáčová,Laura A. Janda,2021-08-16 The studies in the present volume illustrate the current state of the art in the corpus based approach in cognitive linguistics which seeks to motivate linguistic phenomena through the combination of quantitative and qualitative analysis By focusing on language use in different contexts from a variety of perspectives each of the contributions in this volume presents its own unique take on the intertwined relationship between language thought and communication Thus each article shows how a combination of quantitative and qualitative analytical techniques helps shed new light on old issues reflecting the usage based nature of cognitive linguistics and illustrating the explanatory adequacy of corpus based methods Originally published as special issue of Review of Cognitive Linguistics 17 1 2019 **Analogy and Contrast in Language** Karolina Krawczak,Barbara Lewandowska-Tomaszczyk,Marcin Grygiel,2022-10-15 Within cognitive and functional approaches to language structure and grammaticality analogy and contrast represent two fundamental human cognitive capacities which up to now have mostly been examined separately This volume seeks to bridge that gap and in doing so it brings together cutting edge theoretical and empirical research in the field The chapters in this book examine analogy and contrast across a variety of languages English Finnish Hungarian Polish Russian for different language phenomena constructions lexical semantics morphology sentence structure text organization and with the use of various methods corpus linguistics discourse analysis experimental methods qualitative analysis quantitative analysis This state of the art research presented in the book should be of interest to specialists within Cognitive Linguistics corpus linguistics construction grammar discourse analysis translation studies metaphor research and cross cultural research **Ten Lectures on Corpus Linguistics with R** Stefan Th. Gries,2019-11-26 In this book Stefan Th Gries provides an overview on how quantitative corpus methods can provide insights to cognitive usage based linguistics and selected psycholinguistic questions Topics include the corpus linguistics in general its most important methodological tools its statistical nature and the relation of all these topics to past and current usage based theorizing Central notions discussed in detail include frequency dispersion context and others in a variety of applications and case studies four practice sessions offer short introductions of how to compute various corpus statistics with the open source programming language and environment R

Taming the Corpus Masako Fidler,Václav Cvrček,2018-11-09 This book bridges the current quantitative and qualitative text analyses using grammar as a crucial source of investigation Taking data from Czech an inflected language in which the most optimal conditions to respond to this research question are met the book expands the understanding of language and text in ways that have not been executed before For predominantly English based quantitative research this volume fills a crucial gap by examining the relationship between inflection and other phenomena including discourse translation and literature For the current qualitative research the volume provides large empirical data to confirm some of its claims but more importantly it demonstrates the important role of detailed grammatical concepts that have not been considered before

Besides addressing fundamental questions about text analysis methods the volume presents a diverse array of Czech data that are unique in their own right and worthy of dissemination to the general audience *Taming the Corpus From Inflection and Lexis to Interpretation* is divided into three sections Section 1 deals with phonotactics poetic structure morphological complexity used to differentiate literary style and native speakers sense of grammaticality issues pertinent to linguistic typology cognition and language and literary studies Section 2 focuses on inter language relations especially the theory of translation Section 3 demonstrates how quantitative analysis of texts can contribute to our understanding of society and connects the volume to legal language construction of gender and discourse position and implicit ideology **From**

Cognitive Semantics to Lexical Pragmatics Kerstin Fischer, 2000 This book presents a cognitive semantic model of what the whole range of functions is that English and German discourse particles can fulfil how these functions are related why discourse particles fulfil just these functions and not others and what factors condition their interpretation Methodologically conversation analysis and various methods from lexical semantics such as field analysis and semantic decomposition as well as contrastive studies are combined with the statistical analyses of large corpora simulation experiments involving supervised learning in artificial neural networks and the representation of the results in a computational lexicon This methodologically interdisciplinary study thus not only presents a general model of polysemy which includes structural aspects a conceptual background frame and the contribution of the lexeme it also provides full coverage for the functional readings of discourse particles and a unified definition of the word class **Corpus Linguistics. Using Corpus Methods to Triangulate Linguistic Analysis

Jesse Egbert, Paul Baker, 2019-09-17 This book builds on Baker and Egbert's previous work on triangulating methodological approaches in corpus linguistics and takes triangulation one step further to highlight its broader applicability when implemented with other linguistic research methods The volume showcases research methods from other linguistic disciplines and draws on ten empirical studies from a range of topics in psycholinguistics applied linguistics and discourse analysis to demonstrate how these methods might be most effectively triangulated with corpus linguistic methods A concluding chapter synthesizes these findings as a means of pointing the way toward future directions for triangulation and its implications for future linguistic research The combined effect reveals the potential for the triangulation of these methods to not only enhance rigor in empirical linguistic research but also our understanding of linguistic phenomena and variation by studying them from multiple perspectives making this book essential reading for graduate students and researchers in corpus linguistics applied linguistics psycholinguistics and discourse analysis

Corpus, Cognition and Causative Constructions Gaëtanelle Gilquin, 2010-03-24 English causative constructions with cause get have and make are often mistakenly presented as quasi synonymous and more or less interchangeable This book demonstrates the value of corpus linguistics in identifying the syntactic semantic lexical and stylistic features that are distinctive for each of these constructions It also underlines the usefulness of providing corpus studies with a solid theoretical foundation by showing how corpus linguistics can be fruitfully combined with cognitive linguistics which is used both as a starting point for the analysis top down approach and as a framework within which to interpret the corpus results bottom up approach From a methodological point of view the study illustrates the complementarity of corpus and elicitation data and offers tools and methods that could be used to investigate other syntactic structures Finally the book also has a pedagogical dimension in that it examines how the research findings can be applied to foreign language teaching
