Course Content

PART I - COOLING WATER SYSTEMS – AN OVERVIEW

Water with some exceptional thermal and physical properties happened to be the most readily available medium, and is comparatively an economically viable coolant.

It is however reckoned that the quality of water, with regard to dissolved chemical constituents varies from source to source.

The primary cooling water sources could be any of the followings:

1. Surface Water: - Rivers, reservoirs, streams, lake or ponds.
2. Ground Water: - Shallow or deep well waters
3. Saline Water: - Sea, oceans or salty lake
4. Waste & Effluent Water: - Municipal waste, Industrial effluents, Gray water, Sewage

In General

- Surface water is fed from rain or streams. It contain considerable amount of dissolved suspended impurities.
- Lake water has more or less constant chemical analysis. It usually contain lesser amount of dissolved materials but has large quantities of organic matter.
- Spring or well water is cleaner in appearance but contain most of dissolved salts. These usually have high organic purity.
- The ground water supplies contain less suspended matter than the surface water supplies.
- Seawater is the most impure form of natural water. Seawater contain on average 3-5% of dissolved salts out of which 2.6% is NaCl.
- Because of environmental regulations of zero plant discharge, water cost and water scarcity, some plants use saline or effluents as cooling water.

Type of Cooling Systems

The salient features of three common cooling systems is described below:

- 1) Open Re-circulation Systems: *Cooling Towers, Spray Ponds, Fountains*

- The water is cooled as a result of evaporation, in direct contact with air.

Cooling Water Problems and Solutions Anuj Bhatia, 2015-02-28 The three primary reasons that the cooling water treatment may be required are to control corrosion scale formation and the growth of biological agents Any of these problems or more usually a combination of them can cause a loss of efficiency shorten equipment life and push up operating costs Imagine the large amounts of dollars lost when insufficient cooling suddenly curtails operations of process equipment s A very high percentage of people responsible for operation and maintenance of cooling water systems have little or no knowledge of water technology and are therefore totally reliant on specialist water treatment companies to provide up to date cost efficient water treatment programs suitable for their particular plants This 5 hr Quick Book presents an overview of common chemical treatment program that may be required to maintain cooling water systems in good operating condition Reasons and means are discussed for controlling scale deposition corrosion and biological fouling The discussion also covers the information on chemicals used for control and methods available to permit operation within the limits The course is divided in four 4 sections and three 3 annexures SECTION 1 SCALE INHIBITION SECTION 2 CORROSION INHIBITION SECTION 3 BACTERIAL MICROBIOLOGICAL CONTROL SECTION 4 WATER TREATMENT EQUIPMENT AND CONTROLS Annexure 1 Characteristics of some common scale inhibitors Annexure 2 Typical dosage rates pH range and characteristics of common corrosion inhibitors Annexure 3 Typical dosage rates pH range and characteristics of common biocides The course is applicable to engineers and designers involved in power plants oil and gas chemical and petrochemical process facilities refineries industrial plants and HVAC systems in commercial buildings The reader must take a multiple choice quiz consisting of twenty five 25 questions at the end to enhance course learning Learning Objective At the conclusion of this course the student will 1 Understand the critical parameters such as conductivity TDS pH alkalinity and saturation index applicable to cooling water treatment 2 Understand the factors responsible for scale and corrosion 3 Understand the types of scale and methods to minimize its formation 4 Understand relationship between the cycles of concentration and blowdown 5 Understand the physical methods of treating water such as softener dealkalizer ion exchanger filtration and electronic de scaling equipments 6 Understand the corrosion types and the control techniques to mitigate corrosion 7 Learn four types of corrosion inhibitors including anodic cathodic mixed and adsorption types 8 Understand the principles of cathodic protection 9 Learn the possible types of biological fouling and the treatment methods including oxidizing and non oxidizing biocides 10 Understand the chemical feed equipment for closed and open cooling water systems 11 Learn the five application methods for dosing chemicals including their benefits and limitations 12 Learn the control sensors and monitoring devices used in

cooling water treatment **Treatment of cooling water** Aquaprox,2009-12-12 Many cooling systems use water as cooling medium They are found in public buildings industrial production systems or power plants Almost every cooling system using water is degraded by deposition corrosion and microbiological fouling This book identifies the whole bunch of problems due to water cooling systems and proposes specific solutions to all of them The authors have an expertise of over 20 years solving cooling water problems In this book they advise all practitioners which need to plan buy or operate cooling systems
