Large Aperture Array Radar Systems for Automotive Applications Fabian Schwartau, 2021-10-18 The radar besides camera and Lidar systems is a core sensor to enable autonomous driving The relatively limited angular resolution is the major drawback of the radar This thesis shows the development of a conceptual future radar system for automotive applications The focus is on providing a large antenna aperture to achieve the required high angular resolution Two genetic algorithms are developed to optimize the antenna array for a good side lobe level while providing high angular resolution Two demonstrators are built to implement certain aspects of the proposed radar system and prove the general concept viable The first demonstrator features a large aperture with a limited side lobe level and is using a modular approach The modules are synchronized with a radio over fiber system The second demonstrator uses the previously proposed antenna array which is implemented with a synthetic aperture radar approach The system's capabilities in a real scenario are demonstrated and the reconstruction of a high resolution three dimensional image from the captured data is shown Das Radar stellt neben Kamera und Lidar Systemen einen zentralen Sensor für das autonome Fahren dar Dabei ist die relativ geringe Winkelauflösung der primäre Nachteil des Radars Diese Arbeit zeigt die Entwicklung eines konzeptionellen zukünftigen Radarsystems für automobile Anwendungen Der
