

CSC 110 Final Exam Study Guide

The final exam will consist of three phases as described below:

Phase 1: Written Test Phase

In this phase you will take a fifteen-question exam. I will select the questions at random from the first exam you took earlier in the course. Your best approach to studying for this phase is to study that exam. It's posted on the syllabus website.

Phase 2: Design a Microsoft Access Database

In phase 2 you will design a Microsoft Access database. I'm concerned mostly with your demonstrated understanding of relational database terminology, not necessarily in a complete application. At minimum you will create any required tables, their fields, and relationships. You must be able to explain the purposes of Primary Keys and Foreign Keys and how they are applied to create table relationships in a relational database. The following scenario is a typical example of what will be on the test:

Task: You are a small business owner who needs to track customer data. Design a database with two tables: Customers and Purchases.

Give the Customer table the following fields of the corresponding type:

Customers		
Field Name	Type	Description
ID	Autonumber	Primary Key (PK)
First_Name	Text	Customer's first name
Middle_Name	Text	Customer's middle name
Last_Name	Text	Customer's last name
Date_Added	Date	Date added to the database
Address_1	Text	Street Address
City	Text	City
State	Text	State
Zip	Text	

Create a second table named Purchases with the following fields and types:

Purchases		
Field Name	Type	Description
ID	Autonumber	Primary Key (PK)
FK_CustomerID	Number	FK to Customers.ID. This is a look-up column.
Item Purchased	Text	Item purchased
