instructors and students **Computational Modeling and Data Analysis in COVID-19 Research** Chhabhi Rani Panigrahi, Bibudhendu Pati, Mamata Rath, Rajkumar Buyya, 2021-05-09 This book covers recent research on the COVID 19 pandemic. It includes the analysis, implementation, usage, and proposed ideas and models with architecture to handle the COVID 19 outbreak. Using advanced technologies such as artificial intelligence (AI) and machine learning (ML) techniques for data analysis, this book will be helpful to mitigate exposure and ensure public health. We know prevention is better than cure, so by using several ML techniques, researchers can try to predict the disease in its early stage and develop more effective medications and treatments. Computational technologies in areas like AI, ML, Internet of Things (IoT), and drone technologies underlie a range of applications that can be developed and utilized for this purpose. Because in most cases there is no one solution to stop the spreading of pandemic diseases, the integration of several tools and tactics are needed. Many successful applications of AI, ML, IoT, and drone technologies already exist, including systems that analyze past data to predict and conclude some useful information for controlling the spread of COVID 19 infections using minimum resources. The AI and ML approach can be helpful to design different models to give a predictive solution for mitigating infection and preventing larger outbreaks. This book examines the use of artificial intelligence (AI), machine learning (ML), Internet of Things (IoT), and drone technologies as a helpful predictive solution for controlling infection of COVID 19. It covers recent research related to the COVID 19 pandemic and includes the analysis, implementation, usage, and proposed ideas and models with architecture to handle a pandemic outbreak. It examines the performance, implementation, architecture, and techniques of different analytical and statistical models related to COVID 19. It includes different case studies on COVID 19. Digital Access and Museums as Platforms Caroline Wilson-Barnao, 2021-07-25 Digital Access and Museums as Platforms draws on interviews with museum practitioners along with a range of case studies from public and private institutions in order to investigate the tensions and benefits involved in making cultural collections available using digital technologies. Taking a media and critical studies approach to the museum and raising questions about the role of privately owned search engines in facilitating museum experiences, the book questions who collects what, for whom, objects are collected, and what purpose these objects and collections serve. Connecting fieldwork undertaken in Australia and New Zealand with the global practices of technology companies, Wilson-Barnao brings attention to an emerging new model of digital ownership and moderation. Considering the synergising of these institutions with media systems which are now playing a more prominent role in facilitating access to

culture the book also explores the motivations of different cultural workers for constructing the museum as a mediated location Digital Access and Museums as Platforms will be of interest to academics and students working in the fields of museum studies art culture media studies and digital humanities Weighing in on conversations about how technologies are being incorporated into museums the book should also be useful to practitioners working in museums and galleries around the world *Unleashing Innovation on Precision Public Health: Highlights from the MCBIOS & MAQC 2021 Joint*

Conference Ramin Homayouni, Huixiao Hong, Prashanti Manda, Bindu Nanduri, Inimary Toby, 2022-07-07 **Great Power Cyber Competition** David V. Gioe, Margaret W. Smith, 2024-02-20 This volume conceptualizes the threats challenges opportunities and boundaries of great power cyber competition of the 21st century This book focuses on a key dimension of contemporary great power competition that is often less understood due to its intangible character the competition taking place in the cyber domain including information and cyber operations Democracies across the globe find themselves in an unrelenting competition with peer and near peer competitors with a prevailing notion that no state is safe from the informational contest Adversarial powers particularly China and Russia recognize that most competition is principally non kinetic but dominates the information environment and cyberspace and the volume articulates the Russian and Chinese strategies to elevate cyber and information competition to a central position Western governments and in particular the U S government have long conceived of a war peace duality but that perspective is giving way to a more nuanced perception of competition This volume goes beyond analyzing the problems prevalent in the information space and offers a roadmap for Western powers to compete in and protect the global information environment from malicious actors Its genesis is rooted in the proposition that it is time for the West to push back against aggression and that it needs a relevant framework and tools to do so The book demonstrates that Western democratic states currently lack both the strategic and intellectual acumen to compete and win in the information and cyber domains and argues that the West needs a strategy to compete with near peer powers in information and cyber warfare This book will be of much interest to students of cyber warfare information warfare defense studies and international relations in general as well as practitioners **Microcomputers for Educators** James
