Enayat, Roman Kossak, 2004 This is the proceedings of the AMS special session on nonstandard models of arithmetic and set theory held at the Joint Mathematics Meetings in Baltimore MD The volume opens with an essay from Haim Gaifman that probes the concept of non standardness in mathematics and provides a fascinating mix of historical and philosophical insights into the nature of nonstandard mathematical structures In particular Gaifman compares and contrasts the discovery of nonstandard models with other key mathematical innovations such as the introduction of various number systems the modern concept of function and non Euclidean geometries Other articles in the book present results related to nonstandard models in arithmetic and set theory including a survey of known results on the Turing upper bounds of arithmetic sets and functions The volume is suitable for graduate students and research mathematicians interested in logic especially model theory      New Developments in the Analysis of Nonlocal Operators Donatella Danielli, Arshak Petrosyan, Camelia A.

Pop, 2019-02-21 This volume contains the proceedings of the AMS Special Session on New Developments in the Analysis of Nonlocal Operators held from October 28 30 2016 at the University of St Thomas Minneapolis Minnesota Over the last decade there has been a resurgence of interest in problems involving nonlocal operators motivated by applications in many areas such as analysis geometry and stochastic processes Problems represented in this volume include uniqueness for weak solutions to abstract parabolic equations with fractional time derivatives the behavior of the one phase Bernoulli type free boundary near a fixed boundary and its relation to a Signorini type problem connections between fractional powers of the spherical Laplacian and zeta functions from the analytic number theory and differential geometry and obstacle problems for a class of not stable like nonlocal operators for asset price models widely used in mathematical finance The volume also features a comprehensive introduction to various aspects of the fractional Laplacian with many historical remarks and an extensive list of references suitable for beginners and more seasoned researchers alike      Tapas in Experimental

Moll, 2008 Experimental Mathematics is a recently structured field of Mathematics that uses a computer and advanced computing technology as tools to perform experiments such as analysis of examples testing of new ideas and the search of patterns      Algorithmic Probability and Combinatorics Manuel

Lladser, 2010-07-30 This volume contains the proceedings of the AMS Special Sessions on Algorithmic Probability and Combinatorics held at DePaul University on October 5 6 2007 and at the University of British Columbia on October 4 5 2008 This volume collects cutting edge research and expository on algorithmic probability and combinatorics It includes contributions by well established experts and younger researchers who use generating functions algebraic and probabilistic methods as well as asymptotic analysis on a daily basis Walks in the quarter plane and random walks quantum rotor and self avoiding permutation tableaux and random permutations are considered In addition articles in the volume present a variety

of saddle point and geometric methods for the asymptotic analysis of the coefficients of single and multivariable generating functions associated with combinatorial objects and discrete random structures The volume should appeal to pure and applied mathematicians as well as mathematical physicists in particular anyone interested in computational aspects of probability combinatorics and enumeration Furthermore the expository or partly expository papers included in this volume should serve as an entry point to this literature not only to experts in other areas but also to graduate students

**Strategies for Sequential Search and Selection in Real Time** F. Thomas Bruss, 1992 This volume contains the proceedings of the MS IMS SIAM Joint Summer Research Conference on Strategies for Sequential Search and Selection in Real Time held in June 1990 at the University of Massachusetts at Amherst The conference focused on problems related to sequential observation of random variables and selection of actions in real time This book will provide readers with a feeling for the breadth and depth of contemporary research in these areas

*Geometric Analysis* Eric Grinberg, 1992 This volume contains the refereed proceedings of the Special Session on Geometric Analysis held at the AMS meeting in Philadelphia in October 1991 The term geometric analysis is being used with increasing frequency in the mathematical community but its meaning is not entirely fixed The papers in this collection should help to better define the notion of geometric analysis by illustrating emerging trends in the subject The topics covered range over a broad spectrum integral geometry Radon transforms geometric inequalities microlocal analysis harmonic analysis analysis on Lie groups and symmetric spaces and more Containing articles varying from the expository to the technical this book presents the latest results in a broad range of analytic and geometric topics

Q-series from a Contemporary Perspective, 2000

Integral Geometry and Tomography Andrew Markoe, 2006 This volume consists of a collection of papers that brings together fundamental research in Radon transforms integral geometry and tomography It grew out of the Special Session at a Sectional Meeting of the American Mathematical Society in 2004 The book contains very recent work of some of the top researchers in the field The articles in the book deal with the determination of properties of functions on a manifold by integral theoretic methods or by determining the geometric structure of subsets of a manifold by analytic methods Of particular concern are ways of reconstructing an unknown function from some of its projections Radon transforms were developed at the beginning of the twentieth century by researchers who were motivated by problems in differential geometry mathematical physics and partial differential equations Later medical applications of these transforms produced breakthroughs in imaging technology that resulted in the 1979 Nobel Prize in Physiology and Medicine for the development of computerized tomography Today the subject boasts substantial cross disciplinary interactions both in pure and applied mathematics as well as medicine engineering biology physics geosciences and industrial testing Therefore this volume should be of interest to a wide spectrum of researchers both in mathematics and in other fields

*Geometry and Topology in Dynamics* Marcy Barge, Krystyna Kuperberg, 1999 This volume consists of the written presentations of lectures given at two special sessions the AMS Special Session on Topology in

Dynamics Winston Salem NC and the AMS AWM Special Session on Geometry in Dynamics San Antonio TX Each article concerns aspects of the topology or geometry of dynamical systems Topics covered include the following foliations and laminations iterated function systems the three body problem isotopy stability homoclinic tangles fractal dimension Morse homology knotted orbits inverse limits contact structures Grassmanians blowups and continua New results are presented reflecting current trends in topological aspects of dynamical systems The book offers a wide variety of topics of special interest to those working this area bridging topology and dynamical systems     Combinatorial and Geometric Group Theory

Sean Cleary, 2002 This volume grew out of two AMS conferences held at Columbia University New York NY and the Stevens Institute of Technology Hoboken NJ and presents articles on a wide variety of topics in group theory Readers will find a variety of contributions including a collection of over 170 open problems in combinatorial group theory three excellent survey papers on boundaries of hyperbolic groups on fixed points of free group automorphisms and on groups of automorphisms of compact Riemann surfaces and several original research papers that represent the diversity of current trends in combinatorial and geometric group theory The book is an excellent reference source for graduate students and research mathematicians interested in various aspects of group theory     **Advances in Stochastic Inequalities** Theodore Preston Hill, Christian Houdré, 1999 Contains 15 articles based on invited talks given at an AMS Special Session on Stochastic Inequalities and Their Applications held at Georgia Institute of Technology Atlanta This book includes articles that offer a comprehensive picture of this area of mathematical probability and statistics     Combinatorial and Geometric Group Theory

Sean Cleary, Robert H. Gilman, 2002     Quantum Computation and Information Samuel J. Lomonaco, Howard E. Brandt, 2002-10-09 This book is a collection of papers given by invited speakers at the first AMS Special Session on Quantum Computation and Information held at the January 2000 Annual Meeting of the AMS in Washington DC The papers in this volume give readers a broad introduction to the many mathematical research challenges posed by the new and emerging field of quantum computation and quantum information Of particular interest is a long paper by Lomonaco and Kauffman discussing mathematical and computational aspects of the so called hidden subgroup algorithm This book is the companion volume to Quantum Computation A Grand Mathematical Challenge for the Twenty First Century and the Millennium Volume 58 in the Proceedings of Symposia in Applied Mathematics series     *Mathematics of Nonlinear Science* Melvyn Stuart Berger, 1990 Contains the proceedings of an AMS Special Session on the Mathematics of Nonlinear Science held in Phoenix in January 1989 The area of research encompasses a large and rapidly growing set of ideas concerning the relationship of mathematics to science in which the fundamental laws of nature are extended beyond common sense into new areas where the dual aspects of order and chaos abound     *Computational and Statistical Group Theory*, 2002     *Computational Arithmetic Geometry* Kristin Estella Lauter, 2008 With the recent increase in available computing power new computations are possible in many areas of arithmetic geometry To name just a few examples Cremona's tables of elliptic curves now go up

to conductor 120 000 instead of just conductor 1 000 tables of Hilbert class fields are known for discriminant up to at least 5 000 and special values of Hilbert and Siegel modular forms can be calculated to extremely high precision In many cases these experimental capabilities have led to new observations and ideas for progress in the field They have also led to natural algorithmic questions on the feasibility and efficiency of many computations especially for the purpose of applications in cryptography The AMS Special Session on Computational Arithmetic Geometry held on April 29 30 2006 in San Francisco CA gathered together many of the people currently working on the computational and algorithmic aspects of arithmetic geometry This volume contains research articles related to talks given at the session The majority of articles are devoted to various aspects of arithmetic geometry mainly with a computational approach

**Unimodularity in Randomly Generated Graphs** Florian Sobieczky, 2018-11-20 This volume contains the proceedings of the AMS Special Session on Unimodularity in Randomly Generated Graphs held from October 8 9 2016 in Denver Colorado Unimodularity a term initially used in locally compact topological groups is one of the main examples in which the generalization from groups to graphs is successful The randomly generated graphs which include percolation graphs random Erdős-Rényi graphs and graphings of equivalence relations are much easier to describe if they result as random objects in the context of unimodularity with respect to either a vertex transient host graph or a probability measure This volume tries to give an impression of the various fields in which the notion currently finds strong development and application percolation theory point processes ergodic theory and dynamical systems

*Special Functions and Orthogonal Polynomials* Diego Dominici, Robert Sullivan Maier, 2008 This volume contains fourteen articles that represent the AMS Special Session on

Special Functions and Orthogonal Polynomials held in Tucson Arizona in April of 2007 It gives an overview of the modern field of special functions with all major subfields represented including applications to algebraic geometry asymptotic analysis conformal mapping differential equations elliptic functions fractional calculus hypergeometric and  $q$  hypergeometric series nonlinear waves number theory symbolic and numerical evaluation of integrals and theta functions A few articles are expository with extensive bibliographies but all contain original research This book is intended for pure and applied mathematicians who are interested in recent developments in the theory of special functions It covers a wide range of active areas of research and demonstrates the vitality of the field BOOK JACKET
