Constructions in Cognitive Contexts Franziska Günther, 2016-11-07 In what ways are language cognition and perception interrelated Do they influence each other This book casts a fresh light on these questions by putting individual speakers cognitive contexts i e their usage preferences and entrenched patterns of linguistic knowledge into the focus of investigation It presents findings from original experimental research on spatial language use which indicate that these individual specific factors indeed play a central role in determining whether or not differences in the current and or habitual linguistic behaviour of speakers of German and English are systematically correlated with differences in non linguistic behaviour visual attention allocation to and memory for spatial referent scenes These findings form the basis of a new speaker focused usage based model of linguistic relativity which defines language perception cognition effects as a phenomenon which primarily occurs within individual speakers rather than between speakers or speech communities

In addition to its traditional investigation by the disciplines of psychology, psychiatry and neuroscience, the mind has also been a focus of study in the fields of philosophy, economics, anthropology, linguistics, computer science, molecular biology, education and literature. In all these approaches, there is an almost universal fascination with how the mind works and how it affects our lives and our behavior. Studies of the mind and brain have crossed many exciting thresholds in recent years and the study of mind now represents a thoroughly cross-disciplinary effort. Researchers from a wide range of disciplines seek answers to such questions as: What is mind? How does it operate? What is consciousness? This encyclopedia brings together scholars from the entire range of mind-related academic disciplines from across the arts and humanities, social sciences, life sciences and computer science and engineering to explore the multidimensional nature of the human mind.

Language in Flux Robin Cooper, Ruth M. Kempson, 2008 The papers in this collection present a view of language as an evolving system within which flexibility is systemic and subject to progressive change driven by pressures of every-day coordinative action as in conversational dialogue. As these papers demonstrate, these pressures provide a force for variation, hence for adaptation and change. Topics covered include formal and game-theoretical models of evolution, diachronic studies of change, semantic, syntactic, lexical and the role of dialogue factors in promoting such change, psycholinguistic experimental methods probing the nature of coordination in both language and non-language based interaction, formal modelling of dialogue and probabilistic studies of language variation. Authors include highly influential researchers: Joan Bresnan, Devyani Sharma and Ashwini Deo, Robin Cooper and Aarne Ranta, Ronnie Cann and Ruth Kempson, Miriam Bouzouita, Jonathan Ginzburg and Zoran Macura, Patrick Healey, Gerhard Jaeger, Simon Kirby, Hannah Cornish and Kenny Smith, Staffan Larsson, Elizabeth Traugott. Together, these papers present a cross-disciplinary synergy reflecting the view that human linguistic behaviour is essentially coordinative and within this general perspective that language is a system of intrinsic flexibility, hence perpetually in a state of flux. This view involves a radical shift in assumptions away from the traditional view that language competence is a static system relative to which the dynamics of language performance has to be defined and each paper in its own way explores what is involved in modifying such a clear-cut division.

Computers as Theatre Brenda Laurel, 1991 Presents a new theory of human-computer activity. Building on Aristotle's analysis of the form and structure of drama, Laurel shows how similar principles can help us understand what people experience when interfacing with computers.
