Bivariate Analysis: Cyberloafing Predicted from Personality and Age

These days many employees, during work hours, spend time on the Internet doing personal things, things not related to their work. This is called "cyberloafing." Research at ECU, by Mike Sage, graduate student in [Industrial/Organizational Psychology](#), has related the frequency of cyberloafing to personality and age. Personality was measured with a [Big Five](#) instrument. Cyberloafing was measured with an instrument designed for this research. Age is in years. The cyberloafing instrument consisted of 23 questions about cyberloafing behaviors, such as "shop online for personal goods," "send non-work-related e-mail," and "use Facebook." For each item, respondents were asked how often they engage in the specified activity during work hours for personal reasons. The response options were "Never," "Rarely (about once a month)," "Sometimes (at least once a week)," and "Frequently (at least once a day)." Higher scores indicate greater frequency of cyberloafing.

For this exercise, the only Big Five personality factor we shall use is that for Conscientiousness. Bring the data, [Cyberloaf Consc Age.sav](#), into SPSS. Click Analyze, Descriptive Statistics, Frequencies. Scoot all three variables into the pane on the right. Uncheck "Display frequency tables."

Click on "Statistics" and select the statistics shown below. Continue. Click on "Charts" and select the charts shown below. Continue. OK.

How to Use Correlation and Regression Jonathan Sarwono, 2017-10-31 Many people have difficulties in distinguishing between correlation and regression consequently they cannot apply these two procedures correctly The aim of this book is to clarify the basic concepts of correlation and regression so that we can use them easily Correlation belongs to independent relationship That is why there is no independent and dependent variables in correlation While regression belongs to dependent relationship Accordingly in regression there must be a variable that can be identified as an independent variable and another variable that can be identified as a dependent variable To make it easy to conduct calculation the analysis process of the data analysis will use IBM SPSS and Eviews The contents of the book are as follows

Correlation and Regression Analysis Thomas J. Archdeacon, 1994 A blueprint for historians to understand and evaluate the variables and discusses the fundamentals of regression analysis 2 looks at procedures for assessing the level of association among diagnostic methods for identifying and correcting shortcomings Finally part 3 presents more advanced topics including in regression models quantitative analyses they re likely to encounter in journal literature and monographs on research in the social sciences ignore the fact that most historians have little background in mathematics would be folly to decipher equations and follow their logic Concepts are introduced carefully and the operation of equations is explained step by step Annotation copyright by Book News Inc Portland OR

Applied Multiple Regression/correlation Analysis for the Behavioral Sciences Jacob Cohen, Patricia Cohen, 1983 This classic text on multiple regression is noted for its nonmathematical applied and data analytic approach Readers profit from its verbal conceptual exposition and frequent use of examples The applied emphasis provides clear illustrations of the principles and provides worked examples of the types of applications that are possible Researchers learn how to specify regression models that directly address their research questions An overview of the fundamental ideas of multiple regression and a review of bivariate correlation and regression and other elementary statistical concepts provide a

strong foundation for understanding the rest of the text The third edition features an increased emphasis on graphics and the use of confidence intervals and effect size measures and an accompanying CD with data for most of the numerical examples along with the computer code for SPSS SAS and SYSTAT Applied Multiple Regression serves as both a textbook for graduate students and as a reference tool for researchers in psychology education health sciences communications business sociology political science anthropology and economics An introductory knowledge of statistics is required Self standing chapters minimize the need for researchers to refer to previous chapters

Applying Regression and Correlation Jeremy Miles, Mark Shevlin, 2000-11-24 This book takes a fresh look at applying regression analysis in the behavioural sciences by introducing the reader to regression analysis through a simple model building approach The authors start with the basics and begin by re visiting the mean and the standard deviation with which most readers will already be familiar and show that they can be thought of a least squares model The book then shows that this least squares model is actually a special case of a regression analysis and can be extended to deal with first one and then more than one independent variable Extending the model from the mean to a regression analysis provides a powerful but simple way of thinking about what students believe are the more complex aspects of regression analysis The authors gradually extend the model to include aspects of regression analysis such as non linear regression logistic regression and moderator and mediator analysis These approaches are often presented in terms that are too mathematical for non statistically inclined students to deal with Throughout the book maintains a conceptual non mathematical focus Most equations are placed in an appendix where a detailed explanation is given to avoid disrupting the flow of the main text This book will be indispensable for anyone using regression and correlation from undergraduates doing projects to postgraduate and researchers

EZEKIEL, 2018 *Methods of Correlation and Regression Analysis* Mordecai Ezekiel, Karl August Fox, 1959 *Correlation and Regression* Philip Bobko, 1995 The goal of this book is to take statistical theory in correlation and regression and make it accessible to readers using words equations and a variety of applied examples which help explain how the techniques work and under what circumstances some creativity in application is necessary The book's goal is practical and the tone is commonsensical These objectives reflect the underlying philosophy that the application of correlation and regression techniques are not necessarily straightforward and require thinking about each technique in creative ways The first half of the book covers topics in correlation calculating and interpreting r hypothesis

testing of correlations applications in measurement the effects of range restriction etc The second half of the book is devoted to regression topics parameter estimates in bivariate and multivariate regression distribution theory applications to utility analysis polynomials interactions validity shrinkage etc Within each chapter examples are provided which practitioners of science will undoubtedly encounter in some form or another While some chapters cover the traditional topics in regression and correlation other chapters in this book are written entirely as examples of applications issues This makes the book unique Chapter IV is devoted to the ubiquitous problem of measurement in the social sciences and how correlations help us to better assess scientific phenomena Chapter V is devoted to the problem of range restriction It is a common fact of life yet no other book devotes the necessary space to this critical problem Chapter VII is specifically focused on applications of bivariate regression e g regression to the mean utility analysis Finally Chapters IX and X give more extended coverage of interactive models and validity shrinkage two very important issues than you will find in other regression books An Introduction to Linear Regression and Correlation Allen Louis Edwards,1984 Understanding Regression Analysis Larry Schroeder, **An Introduction to Linear Regression and Correlation** Allen Louis Edwards,1984
