Credit Risk Modeling Using Excel And Vba:

Credit Risk Modeling using Excel and VBA Gunter Löffler, Peter N. Posch, 2011-01-31 It is common to blame the inadequacy of credit risk models for the fact that the financial crisis has caught many market participants by surprise. On closer inspection though it often appears that market participants failed to understand or to use the models correctly. The recent events therefore do not invalidate traditional credit risk modeling as described in the first edition of the book. A second edition is timely however because the first dealt relatively briefly with instruments featuring prominently in the crisis: CDSs and CDOs. In addition to expanding the coverage of these instruments the book will focus on modeling aspects which were of particular relevance in the financial crisis: e.g. estimation error and demonstrate the usefulness of credit risk modelling through case studies. This book provides practitioners and students with an intuitive hands on introduction to modern credit risk modelling. Every chapter starts with an explanation of the methodology and then the authors take the reader step by step through the implementation of the methods in Excel and VBA. They focus specifically on risk management issues and cover default probability estimation, scoring, structural models and transition matrices, correlation and portfolio analysis, validation as well as credit default swaps and structured finance. The book has an accompanying website <https://creditriskmodeling.wordpress.com> which has been specially updated for this Second Edition and contains slides and exercises for lecturers.

Credit Risk Modeling using Excel and VBA Gunter Löffler, Peter N. Posch, 2007-04-30 In today's increasingly competitive financial world successful risk management, portfolio management and financial structuring demand more than up to date financial know how. They also call for quantitative expertise including the ability to effectively apply mathematical modeling tools and techniques. In this case credit risk modeling using Excel and VBA with DVD provides practitioners with a hands on introduction to credit risk modeling. Instead of just presenting analytical methods it shows how to implement them using Excel and VBA. In addition to a detailed description in the text a DVD guides readers step by step through the implementation. The authors begin by showing how to use option theoretic and statistical models to estimate a borrower's default risk. The second half of the book is devoted to credit portfolio risk. The authors guide readers through the implementation of a credit risk model, show how portfolio models can be validated or used to access structured credit products like CDOs. The final chapters address modeling issues associated with the new Basel Accord. [Credit Risk Modeling Using Excel and VBA](#) Gunter Löffler, 2007

Credit Risk Modeling Using Excel and VBA David Fuller, 2017-09-22 This book provides practitioners and students with a hands on introduction to modern credit risk modeling. The authors begin each chapter with an accessible presentation of a given methodology before providing a step by step guide to implementation methods in Excel and Visual Basic for Applications (VBA). The book covers default probability estimation, scoring, structural models and transition matrices, correlation and portfolio analysis, validation as well as credit default swaps and structured finance. Several appendices and videos increase ease of access. [Professional Financial Computing Using Excel and VBA](#)

Humphrey Kwong Kwai Tung, Humphrey K. K. Tung, Donny C. F. Lai, Michael C. S. Wong, 2010-06-15 Professional Financial Computing Using Excel and VBA is an admirable exposition that bridges the theoretical underpinnings of financial engineering and its application which usually appears as a black box software application. The book opens the black box and reveals the architecture of risk modeling and financial engineering based on industry standard stochastic models by utilizing Excel and VBA functionality to create a robust and practical modeling tool kit. Financial engineering professionals who purchase this book will have a jumpstart advantage for their customized financial engineering and modeling needs. Dr Cameron Wicentowich, Vice President Treasury Analytics, Canadian Imperial Bank of Commerce (CIBC), Spreadsheet modeling for finance has become a standard course in the curriculum of many Quantitative Finance programs since the Excel-based Visual Basic programming is now widely used in constructing optimal portfolios, pricing structured products, and managing risks. Professional Financial Computing Using Excel and VBA is written by a unique team of finance physics and computer academics and practitioners. It is a good reference for those who are studying for a Masters degree in Financial Engineering and Risk Management. It can also be useful for financial engineers to jump start a project on designing structured products, modeling interest term structure or credit risks. Dr Jin Zhang, Director of Master of Finance Program and Associate Professor, The University of Hong Kong, Excel has been one of the most powerful tools for financial planning and computing over the last few years. Most users utilize a fraction of its capabilities. One of the reasons is the limited availability of books that cover the advanced features of Excel for Finance. Professional Financial Computing Using Excel and VBA goes the extra mile and deals with the Excel tools many professionals call for. This book is a must for professionals or students dealing with financial engineering, financial risk management, computational finance, or mathematical finance. I loved the way the authors covered the material using real-life hands-on examples. Dr Isaac Gottlieb, Temple University, Author, Next Generation Excel Modeling in Excel for Analysts and MBAs.
