Approach presents a novel and comprehensive approach to understanding signals and systems theory. Many texts use MATLAB as a computational tool but Alkin's text employs MATLAB both computationally and pedagogically to provide interactive visual reinforcement of the fundamentals including the characteristics of signals, operations used on signals, time and frequency domain analyses of systems, continuous time and discrete time signals and systems, and more. In addition to 350 traditional end of chapter problems and 287 solved examples, the book includes hands-on MATLAB modules consisting of 101 solved MATLAB examples working in tandem with the contents of the text itself, 98 MATLAB homework problems coordinated with the 350 traditional end of chapter problems, 93 GUI-based MATLAB demo programs that animate key figures and bring core concepts to life, 23 MATLAB projects more involved than the homework problems used by instructors in building assignments, 11 sections of standalone MATLAB exercises that increase MATLAB proficiency and enforce good coding practices. Each module or application is linked to a specific segment of the text to ensure seamless integration between learning and doing. A solutions manual, all relevant MATLAB code, figures, presentation slides, and other ancillary materials are available on an author-supported website or with qualifying course adoption. By involving students directly in the process of visualization, Signals and Systems: A MATLAB Integrated Approach affords a more interactive, thus more effective solution for a one or two semester course on signals and systems at the junior or senior level.
