*Continuously Reinforced Concrete Pavement* National Research Council (U.S.). Highway Research Board, 1973 This report should be of special interest to design materials fundations and construction engineers responsible for continuously reinforced concrete pavements Avant propos *Continuously Reinforced Concrete Pavement* Nelson Pohlman, 2014

Continuously reinforced concrete pavement CRCP is enjoying a renaissance across the United States and around the world CRCP has the potential to provide a long term zero maintenance service life under heavy traffic loadings and challenging environmental conditions provided proper design and quality construction practices are utilized This book provides an overview of the CRCP technology and the major developments that have led to what are referred to herein as the best practices for CRCP design and construction The purpose of this book is to provide the best practices information on rehabilitation strategies for extending the service life of continuously reinforced concrete pavements CRCP The procedures described in this book consist of defining the problem identifying potential solutions and selecting the preferred alternatives Imprint Novinka Failure and Repair of Continuously Reinforced Concrete Pavement National Research Council (U.S.). Transportation Research Board, 1979 The performance of CRCP has revealed a number of failure modes that are traceable to design construction materials and maintenance deficiencies and such other factors as environmental conditions and traffic loadings This report of the Transportation Research Board includes a review of the cumulative experiences of states that have constructed and maintained CRCP Guidelines for repair techniques are included and areas of needed research are identified

Performance of Wisconsin's Continuously Reinforced Concrete Pavements James M. Parry, 1985 Continuously Reinforced Concrete Pavement National Research Council (U.S.). Highway Research Board, 1958 Paper 1 Experience gained from existing continuously reinforced concrete pavements is now adequate to suggest certain design principles Paper 2 In the fall of 1956 the Pennsylvania Department of Highways constructed the first of two experimental continuously reinforced concrete pavements The first of these projects is on route 111 near York In this project measurements are being made of the strain in the bar mat reinforcing steel in a uniform 9 in pavement Studies are also being conducted on the crack frequency the crack width and the slab temperature A theory governing the behavior the details of construction and instrumentation and the results obtained during the first two months of the pavement's life are described *Continuously Reinforced Concrete Pavement (CRCP)* United States. Federal Highway Administration, 2016 Continuously reinforced concrete pavement CRCP provides long life performance with minimal maintenance at a competitive cost CRCP contains continuous longitudinal steel reinforcement and has no transverse joints except as required at end of day construction and at bridge approaches and transitions to other pavement structures Continuous reinforcement is a mechanism for managing the transverse cracking that occurs in all new concrete pavements **Experimental Continuously-reinforced Concrete Pavements** National Research Council (U.S.). **Pavement Workshop**, 1980 This report contains all of the papers presented at a workshop on Continuously Reinforced Concrete Pavements CRCP which was held in New Orleans Louisiana The information presented at the workshop covered all aspects of CRCP including design construction and maintenance procedures The primary emphasis was concentrated on maintenance procedures The proceedings include papers on polymer patching under sealing and flexible and rigid overlays

Pink, Transport and Road Research Laboratory, 1974      *Repair of Continuously Reinforced Concrete Pavement*, 1978 This report details the results of an in depth study of methods and costs of repairing failures in continuously reinforced concrete pavement The study was conducted in 1977 by teams of Engineers from four States Arkansas Louisiana Mississippi and Texas Similarities were revealed in the methods of repair used by maintenance personnel in the four States Subtle differences were also discovered which can be considered for implementation by all of the participants and others to improve their maintenance techniques      *A Continuously Reinforced Concrete Pavement Database* Terry Dossey, Angela Jannini Weissmann, 1989      Repair and Preventative Maintenance Procedures for Continuously Reinforced Concrete Pavement Michael I. Darter, Terry L. Barnett, David J. Morrill, 1982 Procedures for permanently patching and for pressure grouting of continuously reinforced concrete pavement have been developed These procedures have been extensively field tested to ensure their practicality and adequacy The patching procedures reduce costs and lane closure time by considering the different distress types different methods of construction and concrete additive and curing for early opening The pressure grouting procedures provide for a restoration of support beneath the slab and the prevention of future pumping      Continuously Reinforced Concrete Pavement National Cooperative Highway Research Program, 1973      **A Look at the Record of Continuously Reinforced Concrete Pavement** Concrete Reinforcing Steel Institute. **Performance of Continuously Reinforced Concrete Pavement in Illinois** Scott A. LaCoursiere, Michael I. Darter, Scott A. Smiley, 1978 A study of the performance of Continuously Reinforced Concrete Pavement CRCP constructed on the Interstate highway system in Illinois has been conducted The major purpose is to determine the types severities amounts and causes of distress This information will then be used to develop optimum maintenance procedures to repair the distress that occurs and preventative maintenance procedures to reduce the rate of distress occurrence The distress data collected can also be used to update CRCP design procedures Approximately 1230 miles of Interstate highway was surveyed consisting of 7 to 10 in 17 25 cm slabs over granular and stabilized subbases Distress found includes edge punchouts steel ruptures D cracking blowups construction joint failures lug rotation longitudinal cracking distress related to construction problems pumping and shoulder deterioration Heavy truck loads excess free moisture deicing salts construction practice and poor

aggregate quality in the CRCP slab are the major factors causing distress CRCP slab thickness and foundation support have a very significant effect on structural distress development D cracking is causing severe deterioration of several projects Overall the performance of the thicker CRCP slabs i e 9 10 in has been very good under heavy truck traffic however the performance of many sections of thinner CRCP i e 7 8 in has been poor and is showing an accelerated rate of distress development over time The amount of distress expected to occur and the maintenance effort required in the next several years points strongly toward a need for the development of more efficient and durable ways of maintaining CRCP

*Field Performance of Continuously Reinforced Concrete Pavement in Illinois* Nasir G. Gharaibeh, Michael I. Darter, Laura B. Heckel, 1999 This report reviews the design and performance of continuously reinforced concrete pavement CRCP in Illinois Illinois has built over 4 267 two lane km 2 650 miles of CRCP on the Interstate system since the mid 1950s CRCP has been constructed on nearly all urban freeways in the Chicago area and has shown excellent performance under severe weather and heavy traffic conditions The effect of key design and construction parameters on long term CRCP performance is investigated using a database that was compiled based on field surveys conducted from 1977 to 1994 by the Illinois Department of Transportation I DOT Analysis of the data shows the following variables have significant effects on performance longitudinal reinforcement content greatest effect of all variables slab thickness also very significant traffic load applications depth of reinforcement base type and 0 cracking of concrete CRCP built with tubes or chairs exhibited overall about the same performance Experimental field studies in Illinois showed that depth of reinforcement has a large effect on crack width and eventually on punchouts
