Corporate Credit Analysis provides practitioners with the knowledge and tools they need to address these changing requirements. Drawing on the unmatched global resources and capabilities of Standard Poor's, this valuable book organizes its guidelines into three distinct components. Part I, Corporate Credit Risk, helps analysts identify all the essential risks related to a particular firm and measure the firm through both a financial forecast and benchmarking with peers. Part II, Credit Risk of Debt Instruments, explains the impact of debt instruments and debt structures on a firm's recovery prospects should it become insolvent. Part III, Measuring Credit Risk, presents a scoring system to assess the capacity and willingness of a firm to repay its debt in a timely fashion and to evaluate recovery prospects in the event of financial distress. In addition, a fourth component, Cases in Credit Analysis, examines seven real-life studies to provide examples of the book's theory and procedures in practice. Senior Standard Poor's analysts explore diverse cases ranging from North and South America to Europe and the Pacific Rim on topics covering mergers (AT&T, Comcast, MGM Mirage, Kellogg, Keebler), foreign ownership in a merger (Air New Zealand), Ansett Singapore Airlines, sovereign issues (Repsol YPF), peer comparisons (U.S. forestry), and recovery analysis (Yell LBO). Industry Keys to Success are identified and analyzed in each case along with an explanation on how to interpret performance and come to a credit decision. While it is still true that ultimate credit decisions are highly subjective in nature, methodologies and thought processes can be repeatable from case to case. Fundamentals of Corporate Credit Analysis provides analysts with the knowledge and tools they need to systematically analyze a company, identify and analyze the most important factors in determining its creditworthiness, and ensure that more science than art is used in making the final credit decision.

Fundamentals of Credit and Credit Analysis Arnold Ziegel, 2015-01-14 Arnold Ziegel formed Mountain Mentors Associates after his retirement from a corporate banking career of more than 30 years at Citibank. The lessons learned from his experience in dealing with entrepreneurs, multinational corporations, highly leveraged companies, financial institutions, and structured finance led to the development and delivery of numerous senior-level credit risk training programs for major global financial institutions from 2002 through the present. This book was conceived and written as a result of the development of these courses and his experience as a corporate banker. It illustrates the fundamental issues of credit and credit analysis in a manner that tries to take away its mystery. The overriding theme of this book is that when an investor extends credit of any type, the goal is to get your money back and with a return that is commensurate with the risk. The goal of credit analysis is not to make yes or no decisions about the extension of credit but to identify the degree of risk associated with a particular obligor or a particular credit instrument. This is consistent with modern banking, industry portfolio management, and the rating systems of credit agencies. Once the riskiness of an obligor or credit instrument is established, it can be priced or structured to match the risk demands or investment criteria of the entity that is extending the credit. A simple quote from Mr. J.P. Morgan is used often in this text: "Lending is not based primarily on money or property. No sir, the first thing is character." This statement represents one of the conflicts in modern credit analysis: that of models for decision

making versus traditional credit analysis The 2008 financial crisis was rooted in the mortgage backed securities business Sophisticated models were used by investors banks and rating agencies to judge the credit worthiness of billions and maybe trillions of dollars worth of residential mortgage loans that were packaged into securities and distributed to investors The models indicated that these securities would have very low losses Of course huge losses were incurred Mr Morgan had a good point In this case it was both property and character The properties that were the collateral for many of the mortgages had much less value than was anticipated The valuation of the collateral was naive and flawed Many assumptions were made that the value of homes would rise without pause Many mortgage loans were made that were at or even above the appraised value of a residence But character was a huge perhaps larger factor behind these losses Many of the residential mortgage loans were made to individuals who knew that they did not have the income to make the required payments on the mortgages Many of the mortgage brokers and lenders who made these loans also knew that many of the borrowers were not properly qualified And many of the bankers who securitized these loans also may have doubted the credit quality of some of the underlying mortgages If bankers and rating agencies understood the extent of the fraud and lax standards in the fundamental loans backing the mortgage securities or were willing to acknowledge it the fiasco would not have occurred
