Encyclopedia of Optimization Christodoulos A. Floudas, Panos M. Pardalos, 2008-09-04 The goal of the Encyclopedia of Optimization is to introduce the reader to a complete set of topics that show the spectrum of research the richness of ideas and the breadth of applications that has come from this field The second edition builds on the success of the former edition with more than 150 completely new entries designed to ensure that the reference addresses recent areas where optimization theories and techniques have advanced Particularly heavy attention resulted in health science and transportation with entries such as Algorithms for Genomics Optimization and Radiotherapy Treatment Design and Crew Scheduling *Books in Print Supplement*, 2002

Exponential Time Algorithms Serge Gaspers, 2010-02 This book studies exponential time algorithms for NP hard problems In this modern area the aim is to design algorithms for combinatorially hard problems that execute provably faster than a brute force enumeration of all candidate solutions After an introduction and survey of the field the text focuses first on the design and especially the analysis of branching algorithms The analysis of these algorithms heavily relies on measures of the instances which aim at capturing the structure of the instances not merely their size This makes them more appropriate to quantify the progress an algorithm makes in the process of solving a problem Expanding the methodology to design exponential time algorithms new techniques are then presented Two of them combine treewidth based algorithms with branching or enumeration algorithms Another one is the iterative compression technique prominent in the design of parameterized algorithms and adapted here to the design of exponential time algorithms This book assumes basic knowledge of algorithms and should serve anyone interested in exactly solving hard problems Advanced Network Technologies and Intelligent Computing Anshul Verma, Pradeepika Verma, Kiran Kumar Pattanaik, Rajkumar Buyya, Dipankar Dasgupta, 2025-03-07 This book constitutes the refereed proceedings of the 4th International Conference on Advanced Network Technologies and Intelligent Computing ANTIC 2024 held in Varanasi India during December 19 21 2024 The 95 full papers and 15 short papers included in this book were carefully reviewed and selected from 507 submissions They were organized in topical sections as follows Advance Network Technologies and Intelligent Computing **Advanced Computing and Communications: Responsible AI** Srinath Srinivasa, Srinidhi Saragur, Shivakumar Malapaka, 2025-06-30 This book constitutes the refereed proceedings of the 29th International Conference on Advanced Computing and Communications ADCOM 2024 held in Bangalore India during December 18 20 2024 The 21 full papers and 9 short papers presented here were thoroughly reviewed and selected from 79 submissions These papers focus on the recent research trends and developments in the field of Computational and Communications engineering **Books in Print**, 1994 **Real Life Applications of Soft Computing** Anupam Shukla, Ritu Tiwari, Rahul Kala, 2010-05-21 Rapid advancements in the application of soft computing tools and techniques have proven valuable in the development of highly scalable systems and resulted in brilliant applications including those in biometric identification interactive voice response systems and data
