Human history is filled with inventions and other innovations that resulted in a significant and lasting change in our civilization's course of development. From gasoline-powered vehicles to transistor-based electronics or jet airplanes, things we now take for granted often appeared suddenly and unexpectedly. Yet after their introduction, our world changed forever. Over the past two decades, artificial intelligence (AI) and machine learning (ML) have been stealthily increasing their presence in our everyday lives. This random systematic adoption process is exposing humanity to something we never previously directly faced: an intelligence that may and likely will exceed our own. Despite this, most people are not fully aware of current and future benefits, limitations, and threats related to AI/ML. Within health care, there is little awareness of what AI/ML is capable of and how these new capabilities are being implemented or utilized. It is this current state that serves as our starting point in the emerging debate on AI/ML in medicine and surgery, including its integration, projected influence, and many other considerations that are not that different from other past technology adoption paradigms. This book discusses both current trends and future developments in AI and ML across health care. **Monthly Catalogue, United States Public**

Navigating research careers is often highly challenging for early career researchers (ECRs) in the social sciences. The ability to thrive in research careers is complex and requires soft people and management skills and resilience that often cannot be formally taught through university coursework. Written from a peer perspective, this book provides guidance and establishes emotional rapport on topical issues relevant for ECRs in academia and industry. The authors are ECRs who have been successful in navigating their careers and they seek to connect with readers in a supportive and collegial manner. Each chapter includes elements of story telling and scientific thinking and is organized into three parts: 1. a personal story that is relevant to the topic; 2. key content on professional and personal effectiveness based on evidence in the psychological, sociological, and/or management sciences; and 3. action points and practical recommendations. The topics covered are specifically curated for people considering undertaking research careers or already working in research, including: Work Hard, Snore Hard, Recovery from Work for Early Career Researchers, Networking and Collaborating in Academia, Increasing Your Scientific Impact, and Having Fun in the Process. Accelerating Your Research Career with Open Science, Engaging with the Press and Media, Make Your Science Go Viral, How to Maximize the Impact of Your Research, Exploring the Horizon, Navigating Research Careers Outside of Academia, Thinking like an Implementation Scientist, and Applying Your Research in Practice. *Survival Guide for Early Career Researchers* summarizes relevant evidence-based research to offer advice in strategic but also supportive ways to ECRs.
