

Burnout Self-Test Maslach Burnout Inventory (MBI)

The Maslach Burnout Inventory (MBI) is the most commonly used tool to self-assess whether you might be at risk of burnout. To determine the risk of burnout, the MBI explores three components: exhaustion, depersonalisation and personal achievement. While this tool may be useful, it must not be used as a clinical diagnostic technique, regardless of the results.

The objective is simply to make you aware that anyone may be at risk of burnout.
