medical training programs and other health education institutions must undertake a key role in developing AI literacy for clinicians across the spectrum of medical education that includes all health professions. Moreover, the authors assert AI literacy should be incorporated within medical school curriculums as a core competency as well as into graduate medical education training programs and continuing medical education courses. This timely and easy to read guide offers a wide range of chapters that discuss the core concepts and issues relating to AI in medicine including a basic understanding of algorithms, machine learning, large language models, and natural language processing, the limits and pitfalls of AI, ethical and legal issues, the evolving regulatory landscape around AI, as well as how AI is currently being used in healthcare, to name just a few compelling topics. Additionally, AI technologies will change how medical school curriculums are delivered and how student competencies are assessed, maintain the authors. Therefore, medical educators will not only need to rethink how and what medical information is conveyed to students during formal instruction but also must be prepared for AI-powered programs being used to assess students and trainees for the purpose of licensure and board certification.
