Abstract. Nowadays enterprise information systems are designed as distributed network systems, where existing information systems and new components are connected together via a middleware. In most cases, architectures of the systems can be described informally or semi-formally by means of common design tools. But there are also critical applications where an information system is getting involved, and a formal architecture specification is necessary. This paper describes a design of a framework for distributed information systems with a mobile architecture and an outline of its implementation. The framework provides an automatic derivation of a formal specification from an implementation of system, without an explicit formal description in a design phase of project. The derived specification can be used for a quick formal proof of correctness after radical changes in an implementation phase, without a maintenance of a formal design.

1 Introduction

Nowadays information systems are in most cases designed as distributed network systems. A globalisation in a sphere of business creates need for decentralised systems with a correct data distribution, distributed processing, reservation of resources and a reliable communication infrastructure. The distributed information systems are designed as a network of communicating and partially independent components where each component performs its specific task, by itself or with help of other components. In this view, a process in the information system represents a group of components and a scheme of their interaction.

An architecture design of a distributed information system and its implementation can be very complex and difficult. Formal approaches can eliminate most failures by model checking, but they require a formal specification of architecture in a design phase of project. Unfortunately, many enterprise information systems aren't build "from scratch", they are developed as confederations of existing information systems reusing a well-established software products. In this case, a designer of a distributed information system hasn't a full control over an architecture design and a formal model often doesn't correspond to the real implementation of information system.

Web Services Gustavo Alonso, Fabio Casati, Harumi Kuno, Vijay Machiraju, 2013-03-14 Like many other incipient technologies Web services are still surrounded by a tremendous level of noise This noise results from the always dangerous combination of wishful thinking on the part of research and industry and of a lack of clear understanding of how Web services came to be On the one hand multiple contradictory interpretations are created by the many attempts to realign existing technology and strategies with Web services On the other hand the emphasis on what could be done with Web services in the future often makes us lose track of what can be really done with Web services today and in the short term These factors make it extremely difficult to get a coherent picture of what Web services are what they contribute and where they will be applied Alonso and his co authors deliberately take a step back Based on their academic and industrial experience with middleware and enterprise application integration systems they describe the fundamental concepts behind the notion of Web services and present them as the natural evolution of conventional middleware necessary to meet the challenges of the Web and of B2B application integration Rather than providing a reference guide or a how to write your first Web service kind of book they discuss the main objectives of Web services the challenges that must be faced to achieve them and the opportunities that this novel technology provides Established as well as recently proposed standards and techniques e g WSDL UDDI SOAP WS Coordination WS Transactions and BPEL are then examined in the context of this discussion in order to emphasize their scope benefits and shortcomings Thus the book is ideally suited both for professionals considering the development of application integration solutions and for research and students interesting in understanding and contributing to the evolution of enterprise application technologies
