

## Activity 1: Analyzing the Text

### Instructions:

1. Read the text carefully and identify the main idea and supporting details. Write a short summary of the text in your own words.
2. Analyze the text for rhetorical devices. Identify at least three rhetorical devices used in the text and explain how they contribute to the author's purpose.
3. Consider the author's tone and style. How does the author's choice of words and sentence structure affect the overall effect of the text?
4. Reflect on the text and its relevance to your own life. How does the text challenge your current beliefs or perspectives? What actions, if any, does the text inspire you to take?

## Activity 2: Writing a Response

### Instructions:

1. Write a response to the text, addressing the author's main argument and supporting details.

Your response should be at least 250 words long and include a thesis statement.

### Questions:

1. What is the author's main argument? What evidence does the author provide to support this argument?
2. How does the author's tone and style affect the overall effect of the text? What rhetorical devices does the author use to persuade the reader?

**A New Kind of Computational Biology** Parimal Pal Chaudhuri, Soumyabrata Ghosh, Adip Dutta, Somshubhro Pal Choudhury, 2018-09-26 This book reflects more than three

decades of research on Cellular Automata CA and nearly a decade of work on the application of CA to model biological strings which forms the foundation of A New Kind of Computational Biology pioneered by the start up CARLBio After a brief introduction on Cellular Automata CA theory and functional biology it reports on the modeling of basic biological strings with CA starting with the basic nucleotides leading to codon and anti codon CA models It derives a more involved CA model of DNA RNA the entire translation process for amino acid formation and the evolution of protein to its unique structure and function In subsequent chapters the interaction of Proteins with other bio molecules is also modeled The only prior knowledge assumed necessary is an undergraduate knowledge of computer programming and biology The book adopts a hands on do it yourself approach to enable readers to apply the method provided to derive the CA rules and comprehend how these are related to the physical rules observed in biology In a single framework the authors have presented two branches of science Computation and Biology Instead of rigorous molecular dynamics modeling which the authors describe as a Bottoms Up model or relying on the Top Down new age Artificial Intelligence AI and Machine Language ML that depends on extensive availability of quality data this book takes the best from both the Top Down and Bottoms up approaches and establishes how the behavior of complex molecules is represented in CA The CA rules are derived from the basic knowledge of molecular interaction and construction observed in biological world but mapped to a few subset of known results to derive and predict results This book is useful for students researchers and industry practitioners who want to explore modeling and simulation of the physical world complex systems from a different perspective It raises the inevitable the question Are life and the universe nothing but a collection of continuous systems processing information
