Mavris, 2016-04-19 The rapid evolution of technical capabilities in the systems engineering SE community requires constant clarification of how to answer the following questions What is Systems Architecture How does it relate to Systems Engineering What is the role of a Systems Architect How should Systems Architecture be practiced A perpetual reassessment of concepts and practices is taking place across various systems disciplines at every level in the SE community Architecture and Principles of Systems Engineering addresses these integral issues and prepares you for changes that will be occurring for years to come With their simplified discussion of SE the authors avoid an overly broad analysis of concepts and terminology Applying their substantial experience in the academic government and commercial R D sectors this book is organized into detailed sections on Foundations of Architecture and Systems Engineering Modeling Languages Frameworks and Graphical Tools Using Architecture Models in Systems Analysis and Design Aerospace and Defense Systems Engineering Describing ways to improve methods of reasoning and thinking about architecture and systems the text integrates concepts

standards and terminologies that embody emerging model based approaches but remain rooted in the long standing practices of engineering science and mathematics With an emphasis on maintaining conceptual integrity in system design this text describes succinct practical approaches that can be applied to the vast array of issues that readers must resolve on a regular basis An exploration of the important questions above this book presents the authors invaluable experience and insights regarding the path to the future based on what they have seen work through the power of model based approaches to architecture and systems engineering      *Executable Architectures for Modeling Command and Control Processes* ,2006

This paper presents a high level modeling and simulation M S approach that is intended to be used early in the systems engineering lifecycle The approach leverages behavior modeling techniques for designing executable function flows i e functional simulation It is built on system architecture products such as DoD Architecture Framework DoDAF products and is referred to as Executable Architecture EA EA is designed to provide a higher level view or abstraction of certain definable processes Besides being an effective way of disseminating architecture visions to a wide range of stakeholders EA provides the following benefits Validation of the system architecture based on operational processes Insight into the military usefulness of the system Generation of first order end to end performance metrics Discovery of hidden or overlooked requirements A way to document validate refine and communicate strategic objectives An early construct for trade analyses in the systems engineering space      *Information technology architecture needed to guide modernization of DOD's financial operations.* ,2001 To correct its long standing and pervasive financial management weaknesses the Department of Defense DOD plans to invest billions of dollars to modernize its financial management operations and supporting systems Effectively managing such a large and complex endeavor requires among other things a well defined and enforced blueprint for operational and technological change commonly referred to as an enterprise architecture Such an architecture provides a clear and comprehensive picture of an entity whether it is an organization e g federal department agency or bureau or a functional or mission area that cuts across more than one organization e g financial management or combat identification 1 This picture consists of three integrated components a snapshot of the enterprise s current operational and technological environment a snapshot of its target environment and a capital investment road map for transitioning from the current to the target environment The use of enterprise architectures is a best practice in information technology IT management followed by leading public and private organizations and is required by the Clinger Cohen Act of 1996 the Office of Management and Budget OMB and DOD 2 Our experience with federal agencies has shown that attempting a major modernization effort without a complete and enforceable enterprise architecture results in systems that are duplicative are not well integrated are unnecessarily      **Leveraging Executable Architectures in a Joint Environment** ,2009 These briefing charts detail analysis utilizing executable architectures and demonstrate its capabilities to support Joint Systems Engineering analysis Overview developing enterprise architecture using activity models to develop executable architectures leveraging executable

integrated Architecture most often the discussion leads directly to the DoD Architecture Framework and its related products While the Framework plays a large part in providing a common lexicon by which the primitives that compose integrated architectures are described delving directly into spreadsheets and boxologies misses the point of why we re creating integrated architectures This paper will clarify the overarching purpose of integrated architectures provide associated implications associated with the enterprise portfolios into which they fit and describe a methodology by which the architecture community can improve the process of developing and maintaining architectures in order to meet the intent of the Clinger Cohen Act by providing the means for analysis by which one can achieve efficient distribution of limited resources

**Development and Analysis of Integrated C4ISR Architectures**, 2005 The U S Army continues to struggle with creating doctrinally correct robust consistent and all inclusive operational system and technical views based on the Department of Defense Architecture Framework Having detailed integrated and up to date architecture views is essential to answering questions involving alternative system designs and operating procedures conducting gap overlap and connectivity analyses among programs of record and providing traceable data upon which to base near and far term acquisition decisions as the armed services undergo Transformation This paper presents an overview of the Communications Electronics Research Development and Engineering Center Command Control Communications Computer Intelligence Surveillance and Reconnaissance C4ISR methodology for developing and utilizing integrated architecture products for the purposes of C4ISR System of Systems engineering analyses

**Validating DoD Architectures: The Promise of Systems Engineering**, 2006 Today s needs for interoperability and portfolio management across military organizations worldwide lead to increased focus on architecture development Architecture frameworks are sponsored by Defense Departments in Australia Canada France Korea United Kingdom and United States The majority of today s efforts in architecture development focus on generation of disparate architecture views seemingly without the benefit and rigor offered by systems engineering This paper describes the DoDAF validator a Model Based Systems Engineering MBSE approach to the

architecture development process The approach is an extension to a proven systems engineering process that creates a win win scenario for executive oversight team as well as the operational and engineering communities The process also ensures that interoperability based on executable design verification leads to program success and consistent and accurate architecture perspectives for further analysis
