Layers of the Earth

Chapter 1: Temperature and Composition

Temperature: Temperatures deep inside the earth can range from $5,000^{\circ}\text{C}$ ($9,000^{\circ}\text{F}$). That's as hot as the sun! Because of heat, intense pressures, and radioactive decay, instead of having long-lived (billions of years) the system, it is already about 4.5 billion years old. A cross-section of the earth's interior is shown next. The temperatures increase as you go deeper, and it's all about heat. The temperatures increase as you go deeper, and it's all about heat. The temperatures increase as you go deeper, and it's all about heat.

The lithosphere is the outer layer, averaging about $1,000^{\circ}\text{C}$, and is roughly twice as hot as the atmosphere above it. It includes what is also called the "litho" or lithosphere. The lithosphere is the part between the crust and the mantle layers. The upper mantle is the hottest, the temperatures of about $1,000^{\circ}\text{C}$, and the lower mantle is the coolest, reaching temperatures over $5,000^{\circ}\text{C}$.

Finally, the core is the hottest at about $5,000^{\circ}\text{C}$, being the "core" of the planet.
