a substructure database is the set of files that describe the mechanical and geometrical properties of a substructure and abaqus writes all substructure data to the substructure database during the substructure generation analysis

*substructure generation in abaqus imechanica* - Mar 01 2022

dec 17 2013 i have created a substructure in abaqus as output i will like to see the substructure matrices mass stiffness and damping matrices however i m only able to write the mass and stiffness matrices to an output file mtx does anyone know how to create an output file including both the mass stiffness and damping matrices of the substructure

**substructuring and substructure analysis massachusetts** - Feb 12 2023

the basic substructuring idea is to consider a substructure a part of the model separately and eliminate all but the degrees of freedom needed to connect this part to the rest of the model so that the substructure appears in the model as a substructure a collection of finite elements whose response is defined by the stiffness and mass o

**using substructures virginia tech** - Dec 10 2022

substructures are collections of elements from which the internal degrees of freedom have been eliminated retained nodes and degrees of freedom are those that are recognized externally at the usage level when the substructure is used in an analysis and they are defined during generation of the substructure

limitations of structural elements membrane elements cannot be used to overlay a substructure that consists of second order three dimensional brick elements of type c3d20 r h if the substructure will be used as a slave surface normally abaqus

standard automatically converts c3d20 r h brick elements to elements with midface nodes c3d27 r h because this

*2 14 1 substructuring and substructure analysis* - Apr 14 2023

in abaqus standard the response within a substructure once it has been reduced to a substructure is considered to be a linear perturbation about the state of the substructure at the time it is made into a substructure

set this parameter equal to yes default if the substructure eigenproblem needs to be solved during substructure generation in abaqus substructure eigenvectors can be used to define substructure modal damping for a given substructure abaqus standard will evaluate the stiffness associated with frequency dependent springs and dashpots at

*1 16 1 analysis of a frame using substructures* - Mar 13 2023

the purpose of this example is to provide basic demonstration and verification of the substructuring capabilities in abaqus problem description the example is a frame consisting of two columns connected by a beam figure 1 16 1 1 the columns and the beam are each modeled with 10 elements of type b21 once a substructure has been
