Adsorption Science and Technology D. Do Duong, 2000 This book is the proceedings of the second Pacific Basin Conference on Adsorption Science and Technology that was held May 14 18 2000 in Brisbane Australia Proceedings of the 5th Pacific Basin Conference on Adsorption Science and Technology (PBAST 5) Arvind Rajendran, 2010 **Adsorption: Science and Technology** A.E. Rodrigues, M. Douglas LeVan, Daniel Tondeur, 2012-12-06 Proceedings of the NATO Advanced Study Institute Vimeiro Portugal July 17 29 1988 **Characterization of Porous Solids VI**, 2002-11-14 This book contains 99 of the papers that were presented at the 6th in the series of Symposia on Characterization of Porous Solids held in Alicante Spain May 2002 Written by leading international specialists in the subject the contributions represent an up to date and authoritative account of recent developments around the world in the major methods used to characterize porous solids The book is a useful work of reference for anyone interested in characterizing porous solids such as MCM 41 mesoporous materials pillared clays etc Papers on pore structure determination using gas adsorption feature strongly together with papers on small angle scattering methods mercury porosimetry microcalorimetry scanning probe microscopies and image analysis Nanoporous Materials: Science And Engineering G Q Max Lu, Xiu Song Zhao, 2004-11-22 Porous materials are of scientific and technological importance because of the presence of voids of controllable dimensions at the atomic molecular and nanometer scales enabling them to discriminate and interact with molecules and clusters Interestingly the big deal about this class of materials is about the nothingness within the pore space International Union of Pure and Applied Chemistry IUPAC classifies porous materials into three categories micropores of less than 2 nm in diameter mesopores between 2 and 50 nm and macropores of greater than 50 nm In this book nanoporous materials are defined as those porous materials with pore diameters less than 100 nm Over the last decade there has been an ever increasing interest and research effort in the synthesis characterization functionalization molecular modeling and design of nanoporous materials The main challenges in research include the fundamental understanding of structure property relations and tailor design of nanostructures for specific properties and applications Research efforts in this field have been driven by the rapid growing emerging applications such as biosensor drug delivery gas separation energy storage and fuel cell technology nanocatalysis and photonics These applications offer exciting new opportunities for scientists to develop new strategies and techniques for the synthesis and applications of these materials This book provides a series of systematic reviews of the recent developments in nanoporous materials It covers the following topics 1 synthesis processing characterization and property evaluation 2 functionalization by physical and or chemical treatments 3 experimental and computational studies on fundamental properties such as catalytic effects transport and adsorption molecular sieving and biosorption 4 applications including photonic devices catalysis environmental pollution control biological molecules separation and isolation sensors membranes hydrogen and energy storage etc a Proceedings of the Third Pacific Basin Conference on Adsorption Science and

Technology, Kyongju, Korea, May 25-29, 2003 Chang-Ha Lee, 2003 This book presents the latest research on adsorption science and technology It serves as an excellent reference for research in areas such as fundamentals of adsorption and ion exchange equilibria and kinetics new materials adsorption characterization novel processes energy and environmental processes Readership Engineers and researchers in adsorption and separation science research students in chemical engineering and physical chemistry
