Signal Processing Louis Auslander, F. Alberto Grünbaum, T. Kailath, J. William Helton, S. Mitter, Pramod P. Khargonekar, 1990-04-23 The two volumes of Signal Processing are based on lectures delivered during a six week program held at the IMA from June 27 to August 5 1988 The first two weeks of the program dealt with general areas and methods of Signal Processing The problem areas included imaging and analysis of recognition x ray crystallography radar and sonar signal analysis and 1-D signal processing speech vision and VLSI implementation The methods discussed included harmonic analysis and wavelets operator theory algorithm complexity filtering and estimation and inverse scattering The topics of weeks three and four were digital filter VLSI implementation and integrable circuit modelling In week five the concentration was on robust and nonlinear control with aerospace applications and in week six the emphasis was on problems in radar sonar and medical imaging Because of the large overlap between the various one week and two week segments of the program we found it more convenient to divide the material somewhat differently Part I deals with general signal processing theory and Part II deals with i application of signal processing ii control theory related themes We are grateful to the scientific organizers Tom Kailath Chairman Louis Auslander F Alberto Grünbaum J William Helton Pramod P Khargonekar

and Sanjoy K Mitter We are also grateful for the generous support given to the IMA program by the Office of Naval Research the Air Force Office of Scientific Research the Army Research Office and the National Security Agency
