Cybersecurity in the Age of Artificial Intelligence Pasi Koistinen, 2025-07-12 Artificial intelligence has stopped knocking politely on the door of cybersecurity it has kicked it open set up shop inside and begun rewriting the rules From generative phishing emails indistinguishable from trusted colleagues to adaptive malware that evolves faster than defenders can react AI has made the threat landscape faster smarter and far less predictable This book is a practical guide to that unsettling reality It doesn't trade in hype or hand waving optimism Instead it lays out in plain language how AI systems create new risks what happens when security practices built for deterministic software fail and why human vigilance and organizational discipline are more important than ever Inside you'll discover How attackers are already using AI to automate

reconnaissance generate malicious code and industrialize social engineering at a scale no human team could match Why defending AI is a fundamentally different challenge with attack surfaces embedded in training data model weights and seemingly innocuous prompts How familiar safeguards like static rules perimeter defenses and blacklists fall apart when faced with systems that learn infer and sometimes hallucinate What it takes to design secure trustworthy AI systems from threat modeling and auditing pipelines to deploying explainable models that don't sacrifice accountability for convenience Written for security leaders engineers policymakers and technologists who recognize that the convergence of AI and cybersecurity isn't theoretical it's already operational this book offers a strategic roadmap for navigating a landscape where yesterday's defenses are no longer enough You'll explore real world case studies chatbots leaking confidential data with alarming politeness AI driven phishing campaigns that slip past even well trained employees and defensive models that fail silently because they can't explain their own reasoning Along the way you'll learn frameworks to separate the promising from the perilous the actionable from the aspirational Artificial Intelligence Cybersecurity isn't a manual for fine tuning models or a primer for beginners It assumes you already sense that something is shifting and provides the clarity examples and strategies to respond If you're responsible for securing critical systems or shaping the policies that govern them this book will help you ask better questions make better decisions and avoid the costly mistake of treating AI as just another line item in your technology stack Because in this new era the question isn't whether AI will reshape your security strategy The question is whether you'll be ready when it does

DeepAesthetics Anna Munster, 2025-03-31 Computation has now been reconfigured by machine learning those technical processes and operations that yoke together statistics and computer science to create artificial intelligence AI by furnishing vast datasets to learn tasks and predict outcomes In *DeepAesthetics* Anna Munster examines the range of more than human experiences this transformation has engendered and considers how those experiences can be qualitative as well as quantitative Drawing on process philosophy Munster approaches computational experience through its relations and operations She combines deep learning the subfield of machine learning that uses neural network architectures and aesthetics to offer a way to understand the insensible and frequently imperceptible forms of nonlinear and continuously modulating statistical function Attending to the domains and operations of image production statistical racialization AI conversational agents and critical AI art Munster analyzes how machine learning is operationally entangled with racialized neurotypical and cognitivist modes of producing knowledge and experience She approaches machine learning as events through which a different sensibility registers one in which AI is populated by oddness disjunctions and surprises and where artful engagement with machine learning fosters indeterminate futures
