Himalayan Quality of Life Benjamin L. Saitluanga, 2017-04-18 The book is a study of intra urban inequality in quality of life QOL in Aizawl city The main objectives of the study include analysis of processes and patterns of social differentiation along the three dimensional space of Aizawl city as well as analysis of spatial inequality in QOL at the lowest administrative structure of the city An investigation into spatial pattern of residential differentiation was done at both horizontal and vertical spaces Spatial variation in well being of residents of Aizawl city and the quality of their immediate environment was also studied by taking both objective and subjective indicators The study employed a number of descriptive inferential and multivariate statistical techniques including correlation factor analysis principal component analysis cluster analysis and spatial autocorrelation methods like Moran's I and Local Indicators of Spatial Association LISA Mapping techniques and graphical methods like Choropleth map histogram and line graph were also used With the help of factor analysis the social space of Aizawl city was found to be differentiated along socio economic status family status household size status workers status and ethnic status The most important factor determining residential differentiation was socio economic status Choropleth map of factor scores reveals that the inner city localities were dominated by high socio economic class while poorer people dominated the peripheries Non local ethnic minorities were few but concentrated in some adjoining peripheral localities as well as in inner city localities which have been inhabited by their ancestors since the colonial period Vertical pattern of residential differentiation was also analyzed by taking income variable as a proxy of socio economic status Multi storey buildings in Aizawl city were co inhabited by both richer people and poorer people The richer people were found at the top floors while the poorer people occupied the basement floors Normally the owners of the buildings were found at the top floors while the basement floors were dominated by the renters Spatial variation in QOL was measured with the help of principal component analysis as a weighting technique by taking variables pertaining to both objective and subjective QOL dimensions The values of composite QOL index showed that the central localities have scored better than their peripheral counterparts Correlation analysis of the relationship between objective indicators and subjective indicators provided a low positive value indicating the absence of relationship between the two

dimensions of quality of life Spatial autocorrelation analysis was also performed to see the pattern of clustering of spatially weighted QOL variables across Local Councils With the help of Global Moran s I spatial clusters and spatial outliers were observed for objective dimension of QOL within the study area The value of Moran s I was found to be insignificant for subjective QOL dimension indicating the absence of significant pattern of clustering The study also identified 7 social areas of Aizawl city on the basis of factor scores and composite scores of QOL variables calculated for all Local Councils The identification of clusters was taken out with the help of hierarchical clustering method of cluster analysis These clusters were labeled appropriate names and their characteristics were described in detail The thesis concluded with recommendation of designating these social areas as social development planning zones for obtaining inclusive development

Statistics for the Social Sciences Keenan A. Pituch,James Paul Stevens,2016 Noted for its breadth and depth of coverage of multivariate statistics and its emphasis on power this classic text focuses on a conceptual understanding of the material rather than on proving results Numerous examples along with use of SAS and SPSS indicate what the numbers mean and how to interpret the results **The Chicago Guide to Writing about Multivariate Analysis** Jane E. Miller,2008-04-15

Writing about multivariate analysis is a surprisingly common task Researchers use these advanced statistical techniques to examine relationships among multiple variables such as exercise diet and heart disease or to forecast information such as future interest rates or unemployment Many different people from social scientists to government agencies to business professionals depend on the results of multivariate models to inform their decisions At the same time many researchers have trouble communicating the purpose and findings of these models Too often explanations become bogged down in statistical jargon and technical details and audiences are left struggling to make sense of both the numbers and their interpretation Here Jane Miller offers much needed help to academic researchers as well as to analysts who write for general audiences The Chicago Guide to Writing about Multivariate Analysis brings together advanced statistical methods with good expository writing Starting with twelve core principles for writing about numbers Miller goes on to discuss how to use tables charts examples and analogies to write a clear compelling argument using multivariate results as evidence Writers will repeatedly look to this book for guidance on how to express their ideas in scientific papers grant proposals speeches issue briefs chartbooks posters and other documents Communicating with multivariate models need never appear so complicated again

Multivariate Analysis Klaus Backhaus,Bernd Erichson,Sonja Gensler,Rolf Weiber,Thomas Weiber,2021-10-13 Data can be extremely valuable if we are able to extract information from them This is why multivariate data analysis is essential for business and science This book offers an easy to understand introduction to the most relevant methods of multivariate data analysis It is strictly application oriented requires little knowledge of mathematics and statistics demonstrates the

procedures with numerical examples and illustrates each method via a case study solved with IBM's statistical software package SPSS. Extensions of the methods and links to other procedures are discussed and recommendations for application are given. An introductory chapter presents the basic ideas of the multivariate methods covered in the book and refreshes statistical basics which are relevant to all methods.

Contents: Introduction to empirical data analysis, Regression analysis, Analysis of variance, Discriminant analysis, Logistic regression, Contingency analysis, Factor analysis, Cluster analysis, Conjoint analysis.

The original German version is now available in its 16th edition.
