**Parallel Data-intensive Algorithms and Applications** ,2002      **Parallel Algorithms** M H Alsuwaiyel,2022-05-30

This book is an introduction to the field of parallel algorithms and the underpinning techniques to realize the parallelization. The emphasis is on designing algorithms within the timeless and abstracted context of a high level programming language. The focus of the presentation is on practical applications of the algorithm design using different models of parallel computation. Each model is illustrated by providing an adequate number of algorithms to solve some problems that quite often arise in many applications in science and engineering. The book is largely self contained presuming no special knowledge of parallel computers or particular mathematics. In addition the solutions to all exercises are included at the end of each chapter. The book is intended as a text in the field of the design and analysis of parallel algorithms. It includes adequate material for a course in parallel algorithms at both undergraduate and graduate levels.

**Algorithms & Architectures For Parallel Processing, 4th Intl Conf** Andrzej Marian Goscinski, Horace Ho Shing Ip, Wei-jia Jia, Wan Lei Zhou, 2000-11-24 ICA3PP 2000 was an important conference that brought together researchers and practitioners from academia, industry and governments to advance the knowledge of parallel and distributed computing. The proceedings constitute a well defined set of innovative research papers in two broad areas of parallel and distributed computing: 1. architectures, algorithms and networks; 2. systems and applications.

**Parallel Processing and Parallel Algorithms** Seyed H Roosta, 1999-12-10 Motivation: It is now possible to build powerful single processor and multiprocessor systems and use them efficiently for data processing which has seen an explosive expansion in many areas of computer science and engineering. One approach to meeting the performance requirements of the applications has been to utilize the most powerful single processor system that is available. When such a system does not provide the performance requirements, pipelined and parallel processing structures can be employed. The concept of parallel processing is a departure from sequential processing. In sequential computation one processor is involved and performs one operation at a time. On the other hand, in parallel computation several processors cooperate to solve a problem which reduces computing time because several operations can be carried out simultaneously. Using several processors that work together on a given computation illustrates a new paradigm in computer problem solving which is completely different from sequential processing. From the practical point of view, this provides sufficient justification to investigate the concept of parallel processing and related issues such as parallel algorithms. Parallel processing involves utilizing several factors such as parallel architectures, parallel algorithms, parallel programming languages and performance analysis which are strongly interrelated. In general, four steps are involved in performing a computational problem in parallel. The first step is to understand the nature of computations in the specific application domain.

Parallel Algorithms for Irregular Problems: State of the Art Alfonso Ferreira, José Rolim, 2013-04-17 Efficient parallel solutions have been found to many problems. Some of them can be obtained automatically from sequential programs using compilers. However, there is a large class of problems, irregular problems, that lack efficient solutions. IRREGULAR 94, a workshop and summer school organized in Geneva, addressed the problems associated with the derivation

of efficient solutions to irregular problems This book which is based on the workshop draws on the contributions of outstanding scientists to present the state of the art in irregular problems covering aspects ranging from scientific computing discrete optimization and automatic extraction of parallelism Audience This first book on parallel algorithms for irregular problems is of interest to advanced graduate students and researchers in parallel computer science **Parallel Computing** UNICOM Seminars, University of Liverpool, University Enterprise Training Partnership. COMETT., 1993 **Models for Parallel and Distributed Computation** Ricardo Corrêa, 2002-06-30 This book focuses on advanced techniques used in the design of efficient parallel programs It presents a wide variety of different models of parallel and distributed computation and applications of these models to the design of efficient algorithms to solve numerical and non numerical problems It contains general and specific texts about advanced algorithms for parallel computation and gathers together the state of the art on parallelism with contributions from researchers actively working with parallel computation Its chapters cover a broad variety of models ranging from abstract shared memory models such as PRAM to more realistic models of distributed memory including CGM LogP and BSP To the best of our knowledge no other book in the literature covers state of the art about parallel models as approached in this special edition Audience Practitioners researchers and graduate students in Computer Science Mathematics Engineering and Sciences
