First Steps for Math Olympians: Using the American Mathematics Competitions J. Douglas Faires, 2020-10-26 Any high school student preparing for the American Mathematics Competitions should get their hands on a copy of this book A major aspect of mathematical training and its benefit to society is the ability to use logic to solve problems The American Mathematics Competitions AMC have been given for more than fifty years to millions of high school students This book considers the basic ideas behind the solutions to the majority of these problems and presents examples and exercises from past exams to

illustrate the concepts Anyone taking the AMC exams or helping students prepare for them will find many useful ideas here But people generally interested in logical problem solving should also find the problems and their solutions interesting This book will promote interest in mathematics by providing students with the tools to attack problems that occur on mathematical problem solving exams and specifically to level the playing field for those who do not have access to the enrichment programs that are common at the top academic high schools The book can be used either for self study or to give people who want to help students prepare for mathematics exams easy access to topic oriented material and samples of problems based on that material This is useful for teachers who want to hold special sessions for students but it is equally valuable for parents who have children with mathematical interest and ability As students problem solving abilities improve they will be able to comprehend more difficult concepts requiring greater mathematical ingenuity They will be taking their first steps towards becoming math Olympians

The Contest Problem Book IX Dave Wells, J. Douglas Faires, 2008-12-18 This is the ninth book of problems and solutions from the American Mathematics Competitions AMC contests It chronicles 325 problems from the thirteen AMC 12 contests given in the years between 2001 and 2007 The authors were the joint directors of the AMC 12 and the AMC 10 competitions during that period The problems have all been edited to ensure that they conform to the current style of the AMC 12 competitions Graphs and figures have been redrawn to make them more consistent in form and style and the solutions to the problems have been both edited and supplemented A problem index at the back of the book classifies the problems into subject areas of Algebra Arithmetic Complex Numbers Counting Functions Geometry Graphs Logarithms Logic Number Theory Polynomials Probability Sequences Statistics and Trigonometry A problem that uses a combination of these areas is listed multiple times The problems on these contests are posed by members of the mathematical community in the hope that all secondary school students will have an opportunity to participate in problem solving and an enriching mathematical experience

Cracking the High School Math Competitions Solutions Manual Kevin Wang, Kelly Ren, John Lensmire, 2016-02-01 This book contains the curriculum materials of the Math Challenge courses at Areteem Institute The math competitions for middle and high school students generally do not involve college mathematics such as calculus and linear algebra There are four main topics covered in the competitions Number Theory Algebra Geometry and Combinatorics The problems in the math competitions are usually challenging problems for which conventional methods are not sufficient and students are required to use more creative ways to combine the methods they have learned to solve these problems The companion book *Cracking the High School Math Competitions* covers these topics along with fundamental concepts required and problem solving strategies useful for solving problems in the math competitions such as AMC 10 12 ARML and ZIML Division JV This book provides complete solutions to the problems in the aforementioned book For information about Areteem Institute visit <http://www.areteem.org>
