

This Troubleshooting Guide is intended for all users, including clinical/biomedical engineers and technical personnel, of the myAIRVO™ 2 humidifier. It applies to all myAIRVO 2 humidifiers from lot numbers **140910** and above. Refer to the myAIRVO Product Technical Manual and the myAIRVO 2 User Manual for additional informations and detailed instructions of use.

If this troubleshooting guide does not resolve your issue, please contact your local Fisher & Paykel Healthcare representative.

1. myAIRVO does not turn on

- Press and hold the ON/OFF button for at least 2 seconds.
- Is the myAIRVO 2 plugged into mains power?
- Is the power cord securely inserted into the back of the myAIRVO 2?
- Is the power cord damaged?
 - If yes, replace the damaged cord. See **Section 5.1** of the myAIRVO Product Technical Manual for a **900PT410xx** replacement power cord.
- Connect the myAIRVO 2 into another power outlet.
- Connect a different electrical device into the same power outlet. Turn on the device to confirm that the power outlet is working.
- The myAIRVO 2 may be 'on' with a broken display. Turn the myAIRVO 2 on without the heated breathing tube and check that the audible alarm activates.

2. Power out (black screen)

The auditory alarm will sound for at least 120 seconds.

The most likely cause is a dislodged or disconnected power cord.

- Please follow the instructions in **Section 1**.
Note: Press "audio pause" button to permanently silence the alarm ().
The device will not automatically restart.

3. "Check water"^{Fig. 1}

- Is the water bag empty?
If yes, refill or replace the water bag and press the "mode" button () to reset the alarm.
- Is the water chamber empty?
 - For HC360: Ensure the water level is below the indicated black line.
 - For MR290: If yes, replace the water chamber as it may be damaged. Contact your local Fisher & Paykel Healthcare representative about the faulty chamber.

 Warning: The heater-plate and base of the water chamber may be hot.
- For MR290:
 - Open the vent cap near the water bag spike. This allows the pressure to equalize, letting the water flow into the water chamber.
 - Ensure that there are no kinks in the fluid line, preventing water from flowing into the chamber.

Defense Communications Agency,1971 *Design Jet Error Codes* John De La Garza,2009 Introduction to Error Control Codes Salvatore Gravano,2001 This textbook provides a firm foundation for those studying the field of error control codes giving step by step instruction on this complex topic beginning with single parity code checks and repetition codes Through these basic error control mechanisms the fundamental principles of error detection and correction minimum distance and error control limits are considered With the use of detailed examples it guides students from basic error control codes through linear codes cyclic codes linear feedback shift registers vector fields Galois fields BCH codes and convolutional codes There are many detailed examples throughout the book to illustrate the principles and complex mathematical proofs are omitted where possible to keep the text concise and easy to follow

Cascaded Binary Error Codes. Part 1: Performance Criteria for Cascaded and Other Error Codes AEROSPACE CORP EL SEGUNDO CALIF.,1963 *Codes for Error Detection* Torleiv Kl?ve,2007 There are two basic methods of error control for communication both involving coding of the messages With forward error correction the codes are used to detect and correct errors In a repeat request system the codes are used to detect errors and if there are errors request a retransmission Error detection is usually much simpler to implement than error correction and is widely used However it is given a very cursory treatment in almost all textbooks on coding theory Only a few older books are devoted to error detecting codes This book begins with a short introduction to the theory of block codes with emphasis on the parts important for error detection The weight distribution is particularly important for this application and is treated in more detail than in most books on error correction A detailed account of the known results on the probability of undetected error on the q ary symmetric channel is also given **Design Jet Error Codes** John De La Garza,2009 Error-correcting Codes William Wesley Peterson,1961

correcting codes are fundamental in ensuring the integrity of data transmission and storage systems. These codes employ mathematical algorithms to detect and correct errors that may occur during transmission or storage. Various types of error correcting codes exist, including Hamming codes, Reed Solomon codes, and convolutional codes, each with its own strengths and applications. Error correcting codes play a crucial role in diverse fields such as telecommunications, computer networking, and data storage systems. Their implementation ensures robustness against errors, improving overall system performance and reliability in the face of challenging environments. As technology continues to advance, error correcting codes remain essential for maintaining data integrity in critical applications. This book elucidates new techniques and their applications in a multidisciplinary approach. Also included in this book is a detailed explanation of the concepts and applications of various coding methods, their mathematical underpinnings, their applications in digital communications and data storage. It aims to serve as a resource guide for students and experts alike and contribute to the growth of the discipline. **Error Control**

Through Coding. Volume II. Recurrent Burst-error-correcting Codes C. V. FREIMAN, J. P. Robinson, A. D. Wyner, INTERNATIONAL BUSINESS MACHINES CORP BETHESDA MD., 1964. An encoded recurrent code message will usually consist of a sequence of blocks of b digits where each block contains m redundant or dependent digits and $b - m$ information or independent digits. Unlike block codes, the values assumed by the redundant positions in a particular block no longer depend upon the information digits of that block alone but in general depend upon the information digits of N blocks where N is a multiple of m . The work is divided into four major categories: i) lower bounds on the redundancy of recurrent codes; ii) upper bounds on the redundancy of recurrent codes; iii) comparison of block codes and recurrent codes; and iv) error propagation in recurrent codes.
