

Applications of Smart Card Technology

- A smart card is a hardware capable of performing operations such as key pair generation with minimum power consumption in the least possible time duration. The secure key pairs are capable of handling attacks of a critical and advanced nature of blockchain applications.
- Smart card technology protects private keys inside hardware with tamper-resistant hardware security and interaction restricted to a limited set of commands and responses, which indirectly increases the overall security of blockchain applications.
- It provides straightforward access to cryptographic keys. The smart card can be a simple card, USB device, mobile device, microSD, an embedded secure element chip, or a wearable device. These devices enable easy, portable, user-controlled access to the keys for performing Blockchain transactions.
- They provide Blockchain applications a secure platform and an established, standardized security evaluation and certification program for protecting keys.
