Hierarchical Linear Models Stephen W. Raudenbush, Anthony S. Bryk, 2002 This is a first class book dealing with one of the most important areas of current research in applied statistics the methods described are widely applicable the standard of exposition is extremely high Short Book Reviews from the International Statistical Institute The new chapters 10 14 improve an already excellent resource for research and instruction Their content expands the coverage of the book to include models for discrete level 1 outcomes non nested level 2 units incomplete data and measurement error all vital topics in contemporary social statistics In the tradition of the first edition they are clearly written and make good use of interesting substantive examples to illustrate the methods Advanced graduate students and social researchers will find the expanded edition immediately useful and pertinent to their research TED GERBER Sociology University of Arizona Chapter 11 was also exciting reading and shows the versatility of the mixed model with the EM algorithm There was a new revelation on practically every page I found the exposition to be extremely clear It was like being led from one treasure room to another and all of the gems are inherently useful These are problems that researchers face everyday and this chapter gives us an excellent alternative to how we have traditionally handled these problems PAUL SWANK Houston School of Nursing University of Texas Houston Popular in the First Edition for its rich illustrative examples and lucid explanations of the theory and use of hierarchical linear models HLM the book has been reorganized into four parts with four completely new chapters The first two parts Part I on The Logic of Hierarchical Linear Modeling and Part II on Basic Applications closely parallel the first nine chapters of the previous edition with significant expansions and technical clarifications such as An intuitive introductory summary of the basic procedures for estimation and inference used with HLM models that only requires a minimal level of mathematical sophistication in Chapter 3 New section on multivariate growth models in Chapter 6 A discussion of research synthesis or meta analysis applications in Chapter 7 Data analytic advice on centering of level 1 predictors and new material on plausible value intervals and robust standard estimators While the first edition confined its attention to continuously distributed outcomes at level 1 this second edition now includes coverage of an array of outcomes types in Part III New Chapter 10 considers applications of hierarchical models in the case of binary outcomes counted data ordered categories and multinomial outcomes using detailed examples to illustrate each case New Chapter 11 on latent variable models including estimating regressions from missing data estimating regressions when predictors are measured with error and embedding item response models within the framework of the HLM model New introduction to the logic of Bayesian inference with applications to hierarchical data Chapter 13 The authors conclude in Part IV with the statistical theory and computations used throughout the book including univariate models with normal level 1 errors multivariate linear models and hierarchical generalized linear models **Spatial Regression Models for the Social Sciences** Guangqing

Chi, Jun Zhu, 2019-03-06 *Spatial Regression Models for the Social Sciences* shows researchers and students how to work with spatial data without the need for advanced mathematical statistics Focusing on the methods that are commonly used by social scientists Guangqing Chi and Jun Zhu explain what each method is and when and how to apply it by connecting it to social science research topics Throughout the book they use the same social science example to demonstrate applications of each method and what the results can tell us      **Interaction Effects in Linear and Generalized Linear Models** Robert L. Kaufman, 2018-09-06 Offering a clear set of workable examples with data and explanations *Interaction Effects in Linear and Generalized Linear Models* is a comprehensive and accessible text that provides a unified approach to interpreting interaction effects The book develops the statistical basis for the general principles of interpretive tools and applies them to a variety of examples introduces the ICALC Toolkit for Stata downloadable from the Robert L Kaufman s website and offers a series of start to finish application examples to show students how to interpret interaction effects for a variety of different techniques of analysis beginning with OLS regression The data sets and the Stata code to reproduce the results of the application examples are available online      **Regression Analysis** Richard A. Berk, 2004 Richard Berk identifies a wide variety of problems with regression analysis as it is commonly used and then provides a number of ways in which practice could be improved      *Structural Equation Modeling* David Kaplan, 2008-07-23 Using detailed empirical examples *Structural Equation Modeling* Second Edition presents a thorough and sophisticated treatment of the foundations of structural equation modeling SEM It also demonstrates how SEM can provide a unique lens on the problems social and behavioral scientists face Intended Audience While the book assumes some knowledge and background in statistics it guides readers through the foundations and critical assumptions of SEM in an easy to understand manner      **Propensity Score Analysis** Shenyang Guo, Mark W. Fraser, 2015 Provides readers with a systematic review of the origins history and statistical foundations of Propensity Score Analysis PSA and illustrates how it can be used for solving evaluation and causal inference problems

**Hierarchical Linear Models** Anthony S. Bryk, Stephen W. Raudenbush, 1992 *Hierarchical Linear Models* launches a new Sage series *Advanced Quantitative Techniques in the Social Sciences* This introductory text explicates the theory and use of hierarchical linear models HLM through rich illustrative examples and lucid explanations The presentation remains reasonably nontechnical by focusing on three general research purposes improved estimation of effects within an individual unit estimating and testing hypotheses about cross level effects and partitioning of variance and covariance components among levels This innovative volume describes use of both two and three level models in organizational research studies of individual development and meta analysis applications and concludes with a formal derivation of the statistical methods used in the book      National Assessment of Title I , 2007      **American Book Publishing Record** , 2002      **Subject Guide to Books in Print** , 1996      **Love Thy Neighbor?** Rebecca L. **Modeling Techniques** Ronald H. Heck,Scott L. Thomas,1999-11-01 This book provides a broad overview of basic multilevel modeling issues and illustrates techniques building analyses around several organizational data sets Although the focus is primarily on educational and organizational settings the examples will help the reader discover other applications for these techniques Two basic classes of multilevel models are developed multilevel regression models and multilevel models for covariance structures are used to develop the rationale behind these models and provide an introduction to the design and analysis of research studies using two multilevel analytic techniques hierarchical linear modeling and structural equation modeling      *Hierarchical Linear Modeling* G. David Garson,2013 This book provides a brief easy to read guide to

implementing hierarchical linear modeling using three leading software platforms followed by a set of original how to applications articles following a standard instructional format The guide portion consists of five chapters by the editor providing an overview of HLM discussion of methodological assumptions and parallel worked model examples in SPSS SAS and HLM software The applications portion consists of ten contributions in which authors provide step by step presentations of how HLM is implemented and reported for introductory to intermediate applications      An Introduction to Multilevel

Modeling Techniques Ronald Heck,Scott L. Thomas,2020-03-24 Multilevel modelling is a data analysis method that is frequently used to investigate hierarchal data structures in educational behavioural health and social sciences disciplines Multilevel data analysis exploits data structures that cannot be adequately investigated using single level analytic methods such as multiple regression path analysis and structural modelling This text offers a comprehensive treatment of multilevel models for univariate and multivariate outcomes It explores their similarities and differences and demonstrates why one model may be more appropriate than another given the research objectives New to this edition An expanded focus on the nature of different types of multilevel data structures e g cross sectional longitudinal cross classified etc for addressing specific research goals Varied modelling methods for examining longitudinal data including random effect and fixed effect approaches Expanded coverage illustrating different model building sequences and how to use results to identify possible model improvements An expanded set of applied examples used throughout the text Use of four different software packages i e Mplus R SPSS Stata with selected examples of model building input files included in the chapter appendices and a more complete set of files available online This is an ideal text for graduate courses on multilevel longitudinal latent variable
