In Depth Ai Image Generator Ideas 2025:

Diversity in Visual Representations of the Past Jo Zalea Matias, Nicola Scheyhing, Doris Gutsmiendl-Schumann, 2025-09-26
This volume presents an overview of the diversity or lack thereof in visual representations of the European past that are found in archaeology museums and media. While publications discussing gender stereotypes in European archaeological media exist, other identities remain underrepresented, namely Black Indigenous and People of Color (BIPOC), those with visible and invisible disabilities, and very young and very old. This volume offers insight into these gaps in European media and archaeology while also providing alternative explanations for interpreting these often stereotyped identities and methodologies for inclusion. The chapters within this volume are divided into four themes. Themes cover the development of images of the past and discuss how images are chosen in museums. The book identifies who is missing in images of the past with topics on representing individuals with disabilities, children in museums, the Other in Roman art, and Scythians in museums and books, and critiques approaches to representation and diversity in media such as in textbooks, popular media, and children's books. Finally, the book challenges the lack of diversity and a proliferation of stereotypes in images of the past and asks how we improve on them and create new ones. Overall, this book addresses the need for diversity in images both within academic archaeology and with the broader public.

The Rise of AI in Academic Inquiry Hutson, James, 2024-09-27
The rise of artificial intelligence (AI) has revolutionized academic inquiry, offering powerful tools to enhance research capabilities and improve academic discovery across various fields. AI's capacity for data analysis, pattern recognition, and predictive modeling is transforming how researchers gather insights, design experiments, and interpret complex information. As AI becomes increasingly integrated into academia, it presents both unprecedented opportunities and significant challenges, including issues of data ethics, reproduction, and algorithm bias. To fully leverage the benefits of AI in academia, it is crucial to explore guidelines for responsible and equitable use of these technologies in research practice. *The Rise of AI in Academic Inquiry* analyzes the transformative role of generative artificial intelligence in academic research. This publication navigates the intricacies of AI technologies, including machine learning algorithms and large language models, while redefining traditional research methodologies, enhancing data collection and analysis, and influencing academic inquiry across diverse academic disciplines. This book covers topics such as AI ethics, data, algorithms, and research methods and is a useful resource for computer engineers, academicians, teachers, education professionals, researchers, and scientists.
