Eidson, 2006-05-01 A common sense of time among the elements of a distributed measurement and control system allows the use of new techniques in solving problems with complex synchronization requirements or arising from the interaction of many sensors and actuators Such a common sense of time may be accomplished using the standard IEEE 1588 2002 to synchronize real time clocks integral to each component of the system IEEE 1588 expands the performance capabilities of Ethernet networks so that they become relevant for measurement and control this monograph embodies the first unified treatment of the associated technology standards and applications Readers will gain understanding of the technological context of IEEE 1588 and its role in a variety of application settings To engineers this monograph provides detailed discussion of the complex features of the standard Together with the essential

material on best practice and implementation issues these provide invaluable assistance in the design of new applications

The Technicians Guide to Precision Time Protocol Matt Coutu,2024-08-19 The Technicians Guide to Precision Time Protocol has been specifically developed by Field Technicians and Maintenance Engineers for ease of learning IEEE1588 2019 PTP as quickly as possible With this short guide an understanding of this widely used and highly specialized time synchronization protocol can be discerned and can be implemented on the shop floor or in the field This guide has been written from the perspective of someone using the guide for use with PLCs RTUs P C Relays DFRs and other End Devices Useful simplistic examples for the many varieties of how PTP operates have been included Tips and common problems when implementing PTP are covered

**Entwurf & Verifikation eines Timestampers mit Mikroprogramm-Architektur für das IEEE 1588 - Precision Time Protocol** Martin Schimandl,2009 Mithilfe des Precision Time Protokolls PTP das im Standard IEEE 1588 spezifiziert ist ist es möglich Uhren über Ethernet auf ein paar Nanosekunden genau zu synchronisieren Die Nanosekunden Genauigkeit des Protokolls kann allerdings nur mit einer Hardware Software Mischung erreicht werden Die Hardware für die Mischung wird auf einer Netzwerkkarte implementiert Dabei handelt es sich um eine Netzwerkkarte deren Kernstück ein FPGA darstellt Im FPGA befindet sich der für eine Netzwerkkarte typische MAC und zusätzliche IEEE 1588 Hardware Ein Teil der IEEE 1588 Hardware ist der Timestamper dessen Aufgabe es ist PTP Pakete zu erkennen und dabei einen Zeitstempel zu erzeugen Ziel dieser Arbeit ist es einen neuen Timestamper zu entwickeln der weniger Chipfläche benötigt und im Gbit Ethernet verwendet werden kann Der alte Timestamper basiert auf festverdrahteter Logik ist dadurch nur mäßig erweiterbar und kann nur im 10/100 Mbit Ethernet verwendet werden Diese Arbeit beschäftigt sich mit der Hypothese dass die Chipflächen Reduktion und die Takt Erhöhung dadurch erreicht werden kann dass man bei der Entwicklung des neuen Timestampers von einer speicherbasierten Mikroprogramm Architektur ausgeht With the Precision Time Protocol PTP defined in the IEEE 1588 standard it is possible to synchronize clocks over ethernet with an accuracy in the range of nano seconds To achieve this high accuracy it is necessary to implement parts of the protocol in hardware and keep the rest in software The hardware for this solution is implemented on a network interface card The main component of this network interface card is an FPGA The FPGA consists of the usual network interface card hardware like the MAC and additional IEEE 1588 hardware One component of this IEEE 1588 hardware is the timestamper The task of the timestamper is to detect PTP packets and create timestamps when one is detected The goal of this thesis is to design a new timestamper with reduced chip area and an increased clock rate so it can be used in GBit Ethernet The old timestamper was based on hard wired logic and because of that it was tedious to make enhancements to it Furthermore the old timestamper could only be used in 10/100

Mbit Ethernet This thesis is based on the hypothesis that if the new design is based on a memory based microprogram architecture it is possible to reduce the chip area and increase the clock rate to GBit Ethernet levels **IEC 61588 IEEE 1588** IEEE,2004 **P1588a/D3.5, Jun 2023 - IEEE Approved Draft Standard for a Precision Clock Synchronization Protocol for Networked Measurement and Control Systems Amendment** ,2023 **Implementation of IEEE 1588 PTP Protocol** Vikram Reddy Shamirpeta,L.C. Departament de Teoria del Senyal i Comunicacions,2011 ANGL S Clock synchronization of seismometers is a key point to find the exact location of the earthquake When seismometers are installed at seafloor observatories data is collected through a marine cable and by using the Ethernet protocol In IEEE 1588 protocol instruments are synchronized through an Ethernet connection They exchange timing data with a master clock through Ethernet in order to synchronize the clocks with an error below a microsecond Therefore instruments MUST be able to receive timing data from an external master clock We have developed a Stellaris Luminary LM3S9B96 to be able to implement the clock synchronization through IEEE 1588

Furthermore this board is able to get synchronized through PTPd protocol also will supply different outputs to implement data time stamping for the different types of GPS The principal framing type of frame generated is TSIP TSIP Trimble Standard Interface Protocol and trigger PPS from an external clock due to it would be tested in a real seismometer Taurus from Nanometrics In a normal Taurus GPS receiver inside Taurus provides this information But on the seafloor it is impossible to get signal for a GPS so on this system must be used for getting the correct time stamping for data acquirement It has also been improved to be able to work with other GPS receivers just for making it interoperable with other systems such as NMEA GPS systems and IRIG B **IEEE 1588 IEC 61588 First Edition 2004-09** , *1588-2008 - IEEE Standard for a Precision Clock Synchronization Protocol for Networked Measurement and Control Systems - Redline* ,2008 **IEEE Std 1588-2008 (Revision of IEEE Std 1588-2002)** ,2008
