Muzyka, Christopher S. Luker, 2016 The flipped classroom has become the new buzzword not only among educators but also in the general public with articles in USA Today Washington Post and The New York Times discussing this pedagogical approach Simply stated the flipped classroom is a high tech variation on a pedagogical method that has been around for generations The time honored Socratic method aims

to actively engage students with instructors asking them questions leading them down a path where they are encouraged to see the connections between ideas. Additionally, flipped classrooms resemble the Thayer method which expects students to take responsibility for their own learning by studying material before it is covered in class. Chemistry professors who teach in flipped classrooms embrace a variety of learning theories to guide their implementations. Most chemists who use active learning approaches in their classrooms value some aspect of constructivism theory in which learners must begin their understanding of the concepts in their pre-class assignments. Later, students apply the concepts in class using active learning methods. For this book, the authors define the flipped classroom as one where students gain exposure to course content before class and the face-to-face time involves active learning. Experimenting with flipped classrooms like any new pedagogical technique can be overwhelming, particularly if there is little external impetus to instigate reforms. Significant course changes are undeniably hard and can require a substantial investment of time. However, studies increasingly show flipping to be worth the effort for students. The chapters in Volume 2 of this collection provide further data about how flipping influenced their students' learning.

Instructional Strategies Employed in a Flipped Classroom that Enhance Student Engagement Lou Anne Gasperine, 2016. This qualitative study examined teacher and principal perceptions of activities that promote student engagement in the flipped classroom. Data included a 12 teacher surveys with Likert scale and open-ended questions, b six teacher interviews, c nine classroom observations, and d two principal surveys. Results indicated that specific active learning strategies are divided into two main purposes: pre-class preparation and in-class application activities. Teacher-prepared videos were the preferred mode of pre-class preparation for presentation of concepts. The preferred in-class activities included group work, both small and large group, open-ended questions, problem-based questions, and workbooks, worksheets. Specific reasons emerged for when and how to use large group and small group direct instruction within the class time. The large group time was used to offer general instruction and directions for small group work. The small group work was reserved for practice in applying concepts, allowing for teacher guidance if necessary, extensive student interaction, and more one-on-one direction when needed. The amount of peer discussion and instruction promoted active student engagement using the concepts. Teachers and principals noted more

student engagement during the active learning strategies in the flipped classroom Further research could include studies on whether the flipped classroom format or the active learning strategies are responsible for student learning any long term effects of the flipped classroom on future educational endeavors or if there are patterns of strategies used within a classroom
