 discussions with me about computer architecture Although we had previously worked together for more than a decade in
 Australia we had not seen each other for over a year following my move to Bremen in 1988 Meanwhile John was spending a
 year on study leave at the University of St Andrews in Scotland with Professor Ron Morrison and his persistent programming
 research group From our conversations it was quite clear that John was having a most fruitful time in St Andrews and was
 gaining valuable new insights into the world of persistent programming He was very keen to explore the significance of these
 insights for the MONADS Project which we had been jointly directing since the early 1980s MONADS was not about
 persistent programming In fact it had quite different origins in the areas of software engineering and information protection
 In an earlier stage of the project our ideas on these themes had led us into the world of computer architecture and even
 hardware design in our attempts to provide an efficient base machine for our software ideas The most important practical
 result of this phase of the project had been the development of the MONADS PC a mini computer which would be better
