

urban planning in Vietnam

Summary

ISET-International (ISET) and the provincial DRM agency conducted a flood trace study to identify high-water marks, which indicate maximum flood depths, for the October 2022 flood in Huế City, Vietnam. The high-water marks and their locations were integrated into the GIS database of Huế City and were compared with historical flood depths, rainfall, and river levels during this and previous events to identify both climatic and non-climatic drivers of observed changes in flood patterns. This information is also being used to support urban development planning and flood early warnings.

Our approach

Through application of the Flood Resilience Measurement for Communities, which has evolved into the Climate Resilience Measurement for Communities (CRMC). ISET gathered information about strengths and
