motivation for this effort comes from many sources At a practical level there is always a demand for achieving things in more efficient ways Equally there is the technical challenge of building programs that allow a machine to do something a machine has never done before Both of these desires are contained within AI and both provide the inspirational force behind its development In terms of satisfying both of these desires there can be no better example than machine learning Machines that can learn have an in built effi ciency The same software can be applied in many applications and in many circumstances The machine can adapt its behaviour so as to meet the demands of new or changing environments without the need for costly re programming In addition a machine that can learn can be ap plied in new domains with the genuine potential for innovation In this sense a machine that can learn can be applied in areas where little is known about possible causal relationships and even in circumstances where causal relationships are judged not to exist This last aspect is of major significance when considering machine learning as applied to fi nancial forecasting   Forecasting Financial Markets Using Neural Networks Jason E. Kutsurelis,1998 This research examines andanalyzes the use of neural networks as a forecasting tool Specifically a neural network s ability to predict future trends of Stock Market Indices is tested Accuracy is compared against a traditional forecasting method multiple linear regression analysis Finally the probability of the model s forecast being correct is calculated using conditional probabilities While only briefly discussing neural network theory this research determines the feasibility and practicality of usingneural networks as a forecasting tool for the individual investor This study builds upon the work done byEdward Gately in his book Neural Networks for Financial Forecasting This research validates the work of Gately and describes the development of a neural network that achieved a 93 3 percent probability of predicting a market rise and an 88 07 percent probability of predicting a market drop in the S P500 It was concluded that neural networks do have the capability to forecast financial markets and if properly trained the individual investor could benefit from the use of this forecasting tool   *Fundamentals of Forecasting Using Excel* Kenneth D.
