Note Taking Taking Notes Workbooks Note Taking Skills Note Taking app Note Taking Taking Notes Workbooks Note Taking
Skills Note Taking app Note Taking Taking Notes Workbooks Note Taking Skills Note Taking app **How To Take Good
Notes** Angelos Georgakis,2017-06-25 Why would I need a book on how to take notes Notes are just notes FALSE Scientists
have found that note taking can be as mentally demanding as playing chess can be for an expert While you take notes you
listen carefully to the lecturer you process the new material you organize it in your working memory and you finally write
down what you think is most important All this happens while someone is talking at an average speed of three words per
second and someone is writing down at an average speed of one third of a word per second It doesn't sound easy now does it
Notes are an important tool for learning We don't take notes just to record a few facts so we can review them later Learning
happens as we take notes Taking notes the right way leads to good study practices better performance on exams and long
term retention of information Note taking comes naturally FALSE Note taking is not obvious or intuitive Research has shown
that students fail to capture 40% of the main points in a typical lecture First year students capture only 11% In some studies
even the best note takers seem to record less than 75% of the important information People think they take good notes until
they're told they don't Few of us have consciously thought about how we take notes let alone how to improve the quality of
them We often reproduce the lecturer's phrases verbatim We don't save time by systematic use of abbreviations We fail to
become a good psychologist of our lecturer We fail to pick up his enthusiasm We fail to interpret the tone of his voice We fail
to read his body language And the result is that we fail to take good notes Anyway no one taught me how to take notes in
school or in college TRUE Educators believe that students are able to assess the quality of their notes and follow good
practices However studies have shown the exact opposite The fact that there isn't a course in college dedicated to the art of
taking notes or learning in general makes students believe that this is a natural skill that they can perfect with practice over
the course of their studies At the end of the day everyone has their own way to take notes TRUE In this book you may be
surprised to learn that I don't make any references to different types of note taking systems like those that other books do
The reason is that it's the practices behind the note taking that matter most For example you should not copy the lecturer's
phrases word for word but generate the main points in your own words And you should leave space on your notes for adding
comments and testing yourself later I encourage students to use the Cornell note taking system because it utilizes most of
the principles of effective note taking No matter which note taking system you decide to follow the cognitive effort you will
have to expend is equally high Note taking may not be rocket science but it's definitely science cognitive science And
