It covers fundamental theories as well as advanced applications illustrating how techniques in computational intelligence are transforming engineering practices. The book is organized into distinct sections each concentrating on specific engineering domains in which computational intelligence assumes a critical role. The book presents a methodical coverage of computational intelligence principles and techniques illustrated by examples from various engineering domains, emphasizes a problem solving approach demonstrating how computational intelligence can be used to tackle complex problems, offers use cases and real world examples to facilitate targeted learning and understanding, and includes discussion on ethical considerations advocating for the responsible use of technology and consideration of societal impacts. This reference book is for engineers, researchers, and scholars interested in computational intelligence techniques in engineering. **Enhancing Classroom**

Dialogue Productiveness Yu Song, 2024-11-08 This book demonstrates how artificial intelligence (AI) can be used to uncover the patterns of classroom dialogue and increase the productiveness of dialogue. In this book, the author uses a range of data mining techniques to explore the productive features and sequential patterns of classroom dialogue. She analyses how the Large Language Model (LLM) as an AI technique can be adapted to enhance dialogue contributions. The book also includes valuable feedback and practical cases from teachers and their dialogue transcripts facilitating an understanding of AI use and pedagogical development. This book makes original contributions to the field of classroom dialogue and technology and it will encourage scholars making similar attempts at technological infusion for pedagogical improvement. **Trends and**

Advancements of Image Processing and Its Applications Prashant Johri, Mario José Diván, Ruqaiya Khanam, Marcelo Marciszack, Adrián Will, 2021-11-13 This book covers current technological innovations and applications in image processing, introducing analysis techniques and describing applications in remote sensing and manufacturing among others. The authors include new concepts of color space transformation like color interpolation among others. Also, the concept of Shearlet Transform and Wavelet Transform and their implementation are discussed. Of The Pacific Symposium Russ B Altman, Lawrence Hunter, Marylyn D Ritchie, Tiffany A Murray, Teri E Klein, 2024-11-29

The Pacific Symposium on Biocomputing PSB 2025 is an international multidisciplinary conference for the presentation and discussion of current research in the theory and application of computational methods in problems of biological significance. Presentations are rigorously peer reviewed and are published in an archival proceedings volume. PSB 2025 will be held on January 4-8, 2025, in Kohala Coast, Hawaii. Tutorials and workshops will be offered prior to the start of the conference. PSB 2025 will bring together top researchers from the US, the Asian Pacific nations, and around the world to exchange research results and address open issues in all aspects of computational biology. It is a forum for the presentation of work in databases, algorithms, interfaces, visualization, modeling, and other computational methods as applied to biological problems, with emphasis on applications in data-rich areas of molecular biology. The PSB has been designed to be responsive to the need for critical mass in sub-disciplines within biocomputing. For that reason, it is the only meeting whose sessions are defined dynamically each year in response to specific proposals. PSB sessions are organized by leaders of research in biocomputing's hot topics. In this way, the meeting provides an early forum for serious examination of emerging methods and approaches in this rapidly changing field. *Trends of Artificial Intelligence and Big Data for E-Health* Hounaida Sakly, Kristen

Yeom, Safwan Halabi, Mourad Said, Jayne Seekins, Moncef Tagina, 2023-01-01. This book aims to present the impact of Artificial Intelligence (AI) and Big Data in healthcare for medical decision making and data analysis in myriad fields including Radiology, Radiomics, Radiogenomics, Oncology, Pharmacology, COVID-19 prognosis, Cardiac imaging, Neuroradiology, Psychiatry, and others. This will include topics such as Artificial Intelligence of Things (AIoT), Explainable Artificial Intelligence (XAI), Distributed learning, Blockchain of Internet of Things (BIoT), Cybersecurity, and Internet of Medical Things (IoMTs). Healthcare providers will learn how to leverage Big Data analytics and AI as methodology for accurate analysis based on their clinical data repositories and clinical decision support. The capacity to recognize patterns and transform large amounts of data into usable information for precision medicine assists healthcare professionals in achieving these objectives. Intelligent Health has the potential to monitor patients at risk with underlying conditions and track their progress during therapy. Some of the greatest challenges in using these technologies are based on legal and ethical concerns of using medical data and adequately representing and servicing disparate patient populations. One major potential benefit of this technology is to make health systems more sustainable and standardized. Privacy and data security, establishing protocols, appropriate governance, and improving technologies will be among the crucial priorities for Digital Transformation in Healthcare. **Mastering AI Tools and**

Techniques Ernest R. Tello, 1988. This book focuses on AI (Artificial Intelligence) as well as its impact on such practical areas as advanced user interfaces, intelligent data management, and knowledge acquisition. In this part, you will learn what AI is and how to put AI to work for you. Which AI tools currently exist, how they work, and what you can do with them. The fundamentals of natural language and decision modeling systems. How to develop an expert system. Advanced AI concepts including truth maintenance planning systems, understanding and machine learning, AI programming, and AI programming.
