**Plant Molecular Farming for the Production of Next-Generation Vaccines and Biologics - Prospects and Challenges**, 2024-03-11 Infectious diseases are still a major threat to public health The vaccine remains the most important and safer way of combating infectious diseases Therefore there is an urgent need to look for new ways of vaccine generation that can cut down production costs and processing time The development of rDNA technology allows the expression and purification of proteins in unlimited quantity thus opening an avenue for the development of protein based vaccines as a prophylactic measure against infectious diseases Recombinant therapeutic proteins derived from biological sources including mammalian cells microorganisms suspension cultures or genetically modified organisms by employing biotechnological processes are widely used in clinical applications especially for the treatment and prevention of human or veterinary infections Since the development of human insulin by utilizing recombinant DNA technology in *E. coli* in the 1980s the recombinant therapeutic protein production field has significantly grown and gained major attention Plant molecular farming the production of biologics in plant cells or transgenic plants could offer a cost effective adaptable strategy to produce biologics particularly in low resource settings Molecular farming based strategies could provide an alternative strategy to traditional biologics or vaccine production enabling rapid

development effective deployment and safe administration of vaccines The concept of PMF was initially documented three decades back when recombinant growth hormone was produced in tobacco and sunflower plants Even with such a long history of significant advantages and several proof of concept studies very few plant derived therapeutic products have been clinically translated However the recent progress around the approval of the plant based biopharmaceutical ZMapp by the FDA Medicago s COVID 19 vaccine by Health Canada and the safety of a few plant derived vaccines in clinical trials have displayed the potential of a plant platform for biopharmaceutical production Furthermore constant efforts are being made with respect to the optimization of expression techniques downstream processing and defining standard guidelines for plant products to make an impact of plant derived products on an array of applications New Realities ,1984 **Broadcasting** ,1959 **Unique 3-in-1 Research & Development Directory** ,1989 **National Union Catalog** ,1953 Radio Daily ,1945 vols for 1945 include Shows of tomorrow annual ed The National Union Catalog ,1961 Physics Briefs ,1991 **Broadcasting, Combined with Broadcast Advertising** ,1974 **Musical America** ,1941 *Science Citation Index* ,1995 Vols for 1964 have guides and journal lists *Documentation Abstracts* ,1976 **Radio News** ,1940 Some issues 1943 July 1948 include separately paged and numbered section called Radio electronic engineering edition called Radionics edition in 1943
