Gordon, Brian Guilfoos, 2017-07-12 Introduction to Modeling and Simulation with MATLAB and Python is intended for students and professionals in science social science and engineering that wish to learn the principles of computer modeling as well as basic programming skills The book content focuses on meeting a set of basic modeling and simulation competencies that were developed as part of several National Science Foundation grants Even though computer science students are much more expert programmers they are not often given the opportunity to see how those skills are being applied to solve complex science and engineering problems and may also not be aware of the libraries used by scientists to create those models The book interleaves chapters on modeling concepts and related exercises with programming concepts and exercises The authors start with an introduction to modeling and its importance to current practices in the sciences and engineering They introduce each of the programming environments and the syntax used to represent variables and compute mathematical equations and functions As students gain more programming expertise the authors return to modeling concepts providing starting code for a variety of exercises where students add additional code to solve the problem and provide an analysis of the outcomes In this way the book builds both modeling and programming expertise with a just in time approach so that by the end of the book students can take on relatively simple modeling example on their own Each chapter is supplemented with references to additional reading tutorials and exercises that guide students to additional help and allows them to practice both their programming and analytical modeling skills In addition each of the programming related chapters is divided into two parts one for MATLAB and one for Python In these chapters the authors also refer to additional online tutorials that students can use if they are having difficulty with any of the topics The book culminates with a set of final project exercise suggestions that incorporate both the modeling and programming skills provided in the rest of the volume Those projects could be undertaken by individuals or small groups of students The companion website at <http://www.intromodeling.com> provides updates to instructions when there are substantial changes in software versions as well as electronic copies of exercises and the related code The website also offers a space where people can suggest additional projects they are willing to share as well as comments on the existing projects and exercises throughout the book Solutions and lecture notes will also be available for qualifying instructors
