**Computational Methods for Option Pricing** Yves Achdou, Olivier Pironneau, 2005-01-01 The authors review some important aspects of finance modeling involving partial differential equations and focus on numerical algorithms for the fast and accurate pricing of financial derivatives and for the calibration of parameters This book explores the best numerical algorithms and discusses them in depth from their mathematical analysis up to their implementation in C with efficient numerical libraries

Handbooks in Operations Research and Management Science: Financial Engineering John R. Birge, Vadim Linetsky, 2007-11-16 The remarkable growth of financial markets over the past decades has been accompanied by an equally remarkable explosion in financial engineering the interdisciplinary field focusing on applications of mathematical and statistical modeling and computational technology to problems in the financial services industry The goals of financial engineering research are to develop empirically realistic stochastic models describing dynamics of financial risk variables such as asset prices foreign exchange rates and interest rates and to develop analytical computational and statistical methods and tools to implement the models and employ them to design and evaluate financial products and processes to manage risk and to meet financial goals This handbook describes the latest developments in this rapidly evolving field in the areas of modeling and pricing financial derivatives building models of interest rates and credit risk pricing and hedging in incomplete markets risk management and portfolio optimization Leading researchers in each of these areas provide their perspective on the state of the art in terms of analysis computation and practical relevance The authors describe essential results to date fundamental methods and tools as well as new views of the existing literature opportunities and challenges for future research

**Mathematical and Computational Techniques for Multilevel Adaptive Methods** Ulrich Ruede, 1993-01-01 Multilevel adaptive methods play an increasingly important role in the solution of many scientific and engineering problems Fast adaptive methods techniques are widely used by specialists to execute and analyze simulation and optimization problems This monograph presents a unified approach to adaptive methods addressing their mathematical theory efficient algorithms and flexible data structures R de introduces a well founded mathematical theory that leads to intelligent adaptive

algorithms and suggests advanced software techniques This new kind of multigrid theory supports the so called BPX and multilevel Schwarz methods and leads to the discovery of faster more robust algorithms These techniques are deeply rooted in the theory of function spaces Mathematical and Computational Techniques for Multilevel Adaptive Methods examines this development together with its implications for relevant algorithms for adaptive PDE methods The author shows how abstract data types and object oriented programming can be used for improved implementation

*American-Type Options* Dmitrii S. Silvestrov, 2013-11-27 The book gives a systematical presentation of stochastic approximation methods for models of American type options with general pay off functions for discrete time Markov price processes Advanced methods combining backward recurrence algorithms for computing of option rewards and general results on convergence of stochastic space skeleton and tree approximations for option rewards are applied to a variety of models of multivariate modulated Markov price processes The principal novelty of presented results is based on consideration of multivariate modulated Markov price processes and general pay off functions which can depend not only on price but also an additional stochastic modulating index component and use of minimal conditions of smoothness for transition probabilities and pay off functions compactness conditions for log price processes and rate of growth conditions for pay off functions The book also contains an extended bibliography of works in the area This book is the first volume of the comprehensive two volumes monograph The second volume will present results on structural studies of optimal stopping domains Monte Carlo based approximation reward algorithms and convergence of American type options for autoregressive and continuous time models as well as results of the corresponding experimental studies
