Introduction

There are many different methods for solving the Rubik's cube. They can be divided into two broad categories - layer methods and corners first methods (and there are sub-categories within these broad categories). The method I use for speed-solving is a layer-based method. More specifically, the method I currently use is: cross, F2L, 3-look LL. If you are a newbie other than this description may not mean much to you, so I should add that it's the "Advanced Solution" I described in the [Next Steps](#) section at the end of this page.

There are many great websites that explain intermediate, advanced and expert methods for solving the cube (check out my [Rubik's links](#) page). However, there are very few that explain beginner methods, which is why I wrote this. It's not meant to be a totally comprehensive explanation, it's really just some notes I threw together for some friends I was teaching. I thought it might be useful for others, so I've turned it into a webpage.

This beginner method requires memorising only a few algorithms, and when done efficiently can achieve solves of 60 seconds or faster. I know people who can solve in 30s with a method like this. I, personally, have not done 30s with this method though, so don't be too distressed if you can't either. On the other hand, if you can do 30s solves with this method, then you are top good for this method and you should be learning an Advanced method!

Another benefit of this method is that it is fairly scalable, so more algorithms may be added later to develop it into an advanced method, or if you're really keen, an expert method.

Structure of the cube

We all know that $3 \times 3 \times 3 = 27$, however, rather than thinking about the cube as 27 little "cubies", think about it as 6 fixed centres (that can rotate on their own axis) with 8 corners and 12 edges which rotate around it. As the centres are fixed, the centre colour defines the colour for the face. It's important to remember this otherwise you'd end up trying to do diagonal (mechanically impossible!) things like wondering why you can't work out how to put a corner piece in an edge position, or assuming that you're looking at the blue face merely because 6 of the 9 cubies on it are blue (if the centre is white then it's the white face).

Terminology

When describing the solution for the 2nd and 3rd layers, standard cube notation will be used. Here's what you need to know to read it:

F = front face B = back face R = right face L = left face U = up face D = down face

In addition to a letter, each move may be accompanied by an apostrophe or the number two:

- A letter by itself means turn that face 90 degrees clockwise (eg. F).
- A letter followed by an apostrophe means turn that face 90 degrees anti-clockwise (eg. F').
- A letter followed by the number 2 means turn that face 180 degrees (direction is irrelevant). (eg. F2).

So R U' L2 is shorthand for "turn the right face 90 degrees clockwise, then turn the up face 90 degrees anti-clockwise, then turn the left face 180 degrees". When thinking whether to turn clockwise/anti-clockwise, imagine that you are looking directly at the particular face you are turning.

For each algorithm, the notation is written with the assumption that the core of the cube remains fixed throughout the whole algorithm, and the faces just turn around it. This means that you also need to know how to position the cube to start the algorithm.
